**Raymond Mercantile Co.**

LIMITED

### Help Him Recover Stolen Goods

During the recent fire, Mr. and Mrs. Wm. Stone, of the Raymond Hotel, were heavy losers in furniture and personal property. They are asking co-operation of the local press in trying to locate articles that were apparently taken by individuals after these goods were removed from the burning building.

Mrs. Stone kept her diamond ring in a small hand painted piece of china which was locked in the bookcase. The door of the case, after the fire was found open and the ring missing. A gentleman's green gold ring with sapphire set was also removed from a dresser. The dresser was left. A large nut bowl was taken from the book case and can easily be identified. These three articles are prized by the owners not only because of their intrinsic value but because of their being gifts.

A large sheet tied at four corners contained over \$50 worth of sheets and pillow slips. These were taken after being removed from the building.

Someone whose wearing apparel runs in small sizes got away with Winnie Stone's white sweater, lavender silk dress, navy blue serge dress and a tricolette undershirt. The party who took the heavy plate glass mirror in a 16 by 24 moulding, should feel guilty every time they look at themselves.

These articles and scores of others were removed from the fire and Mr. and Mrs. Stone would appreciate honorable citizens being on the lookout and advise the rightful owners.

### Charles McCarthy Dead

Another of Southern Alberta's old-timers ended a long and useful life last Monday when Chas. McCarthy, age 76, succumbed to heart failure after a prolonged illness. In the early days of the settlement of the southern part of the province Mr. McCarthy was well known in the Spring Coulee and Cardston areas. Later he moved to Raymond, was its first mayor, and has since been one of our Town's best boosters. He founded the Raymond Mercantile and the Raymond Hotel, both of which places were razed to the ground by fire a few days before his death. It has been 36 years since Mr. McCarthy moved from Utah to Alberta.

He is survived by his wife and three grown children: Wilson of Salt Lake City, Charles M. of Bellingham, Wash. and Mrs. DeVoe Woolf of Salt Lake City. His two sons will be present at the funeral to be held this afternoon at two o'clock in the Stake House. Burial will be made in Salt Lake City.

In order that every child in Raymond can see the GOLD RUSH with Charlie Chaplin there will be another spnd matinee on Saturday November 20th. Three big spuds entitles each child to come. There will be a complete change of pictures at the Rex theatre on Saturday, night. "The American Venus" will be shown at regular prices.

### News Notes

Paul Redd will soon begin the erection of a large new residence. S. Ellis has the contract.

FOR SALE—Dresser, Marswell oak heating stove, 2 sets work harness, sewing machine and other small articles.—Apply to J. H. Wall, Raymond.

Mr. and Mrs. C. F. Tollestrup and Mrs. Wm. Wiggil returned last Monday from an auto trip to Salt Lake City.

### News Notes

The 1st ward choir has charge of the entire program at the afternoon services on Sunday and have asked President E. J. Wood who has kindly consented to speak on faith promoting themes. The following musical program has been arranged: anthem, "Praise Ye the Father"; sextette from "Lucia"; anthem "The Radiant Morn"; anthem "Sweet Story of Old". Everybody invited.

Through the kindness of the Extension Department of the University of Alberta, a small travelling library has been sent for the free use of the citizen's of Raymond and is now ready for opening. It is located at present in the annex of the United Church, and will be open for taking and exchanging of books on Friday evening from 7 to 9 o'clock. Mr. Rayson Hague will have charge. We are hopeful that there will be such a demand for these books that an additional supply will soon be called for.

### News Notes

A special parking by law will be taken up and discussed at a special meeting of the council to be held shortly.

Five new crossings on 1st st. East and two new crossings on Broadway have been installed recently.

Mrs. Wm. Fisher entertained the U. F. W. A. at her home last Thursday.

Mr. and Mrs. C. Nilsson, Mr. and Mrs. B. Nilsson and Mrs. M. Alred attended the lecture at Lethbridge last Wednesday evening given by that famous Canadian lecturer Walter McLean. They report an inspiring speech by a very able speaker.

## Votes And Their Value

Analysis of the vote cast in the last Dominion general election discloses the same anomalies and contradictions revealed in elections generally for many years, and which, while causing much dissatisfaction and open criticism have, as yet, failed to result in steps being taken to remedy an admittedly weak condition in our present form of democratic government and in the election of representatives in Parliament. Various schemes have been suggested as a means of overcoming this weakness, but none have proved wholly acceptable to a majority of the people.

The situation complained of is that all votes have not equal value; that, as a matter of fact, the vote of one man, or woman, is in many instances just as effective in electing a representative as the votes of two other men and women; that Canada today does not enjoy representation based on population; that the majority does not rule.

In support of these contentions it is pointed out that in the recent election the Conservatives polled 1,376,747 votes and elected 91 members to the House of Commons, while Liberals and Liberal-Progressives combined polled 1,451,933, or 21,611 votes less, but elected 132 members. In other words, Liberal and Liberal-Progressive votes had greater power than Conservative votes. Why?

The reason is found in the fact that Conservative strength lies chiefly in the large manufacturing cities and centres of population like Toronto, Hamilton, London, Halifax, Vancouver, Montreal and Winnipeg. In these cities Conservatives are usually elected by huge majorities. On the other hand, in smaller urban and rural ridings the candidates of other parties have a fighting chance and are frequently elected but by much smaller majorities.

Furthermore, it has always been an accepted principle that the unit of population entitled to elect a member should be larger for cities than for rural districts. All political parties have agreed to this, it being recognized that a City Member can keep more closely in touch with his constituents than can a member representing a rural riding, and that residents in a city constituency have means of making their views and desires known, and of enforcing their opinions, which is not possible in a rural constituency with a scattered population. There is so much force in this that no party has ever seriously challenged the fairness of requiring a larger population in city constituencies.

The existing plan of single member constituencies with larger populations in city ridings works to the advantage of the Conservatives in the cities where Liberals and Labor are denied the representation to which their numbers entitle them, but, on the other hand, it works to the advantage of Liberals and other groups in the rural ridings.

To right the grievance in both sets of constituencies the advocates of Proportional Representation urge the abolition of the single member constituencies and the creation of larger constituencies electing four or five members each and the use of the single transferable ballot whereby every considerable group of public opinion would be able to obtain representation in exact proportion to its voting strength.

Objection is taken to this plan on the ground that it would result in too many groups in Parliament and the consequent inability of any one party or group to form a strong government. The force of this objection is, however, weakened by the fact that the present system has in no wise prevented such groups, and the deadlock which existed in the last two Parliaments was brought about, not under Proportional Representation, but under the existing system. Even in the newly elected Parliament there are no less than seven distinct groups as follows: Liberals, 119 members; Conservatives, 91; Progressives, 6; Liberal-Progressives, 13; United Farmers of Alberta, 11; Labor, 3, and Independents 2.

Another objection, and a much stronger one, is that while Proportional Representation might be workable in centres of population, it is hardly applicable to settled rural Canada where constituencies to elect four or five members would have to be unduly large.

Hon. Hugh Guthrie, the newly chosen temporary leader of the Conservative party, announces that while he does not favor Proportional Representation, something should be done to remove the inequalities in representation which now exist. He therefore advocates making the unit of population for all constituencies, urban and rural, the same. This would assist to remove the Conservative grievance in rural ridings, but would continue all the handicaps under which Liberals, Labor and others now suffer in the large city constituencies. Further, unless the membership of the House of Commons was largely increased it would mean greatly reducing the representation of all rural and the smaller urban centres while adding enormously to the large cities and manufacturing centres, thus practically giving the Conservative party a permanent position of power.

During the last century giant forward strides have been made in the extension of the franchise and in simplifying and improving methods of elections, but with it all we have rigidly adhered to an obsolete constituency method of dividing the country and which is responsible for the well founded complaints now heard. There is room for reform in this vitally important matter in order that real democracy may prevail.

Every man is willing to patch up a quarrel—provided he is allowed to select the patch.

No poisonous reptiles and few wild animals are to be found in Japan.

Being an endless affair a wedding ring frequently gets one into no end of trouble.

Wild silk produced in Manchuria this year weighed 107,000,000 pounds.

## Children Cry for

**Fletcher's CASTORIA**

MOTHER:—Fletcher's Castoria is especially prepared to relieve infants in arms and children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving natural sleep.

To avoid imitations, always look for the signature of *Dr. H. Fletcher*. Absolutely Harmless—No Opium. Physicians everywhere recommend it.

## Invents Flying Apparatus

Australian Says Perfected Machine Will Cost \$300

Wings will soon adorn the least angelic of men, says M. Lutsch, an Australian inventor. He is credited with building an apparatus to be worn by the individual which will enable every one to do a certain amount of flying in comfort and safety.

The machine consists of a pair of wings moved by an improved motor which, although extremely light in weight, furnishes a surprising amount of power. The first model weighed eighty pounds and lifted the inventor several yards from the ground and enabled him to move swiftly in any direction at will.

M. Lutsch says his invention, when perfected, can be turned out at about \$300.

## 2 Years' Backache Subdued by "Nerviline"

"Backache was the bane of my life, and for two years I was as lame as to be unfit for work," writes E. S. Sloane, from Georgetown. "While in Smith Bros. Drug Store, I heard of Nerviline being a wonderful pain-destroyer, so I decided to try Nerviline. Thanks to Nerviline, my two years' backache was rubbed away, and to-day I am perfectly well."

All those who suffer from weak, aching backs, those whose muscles are stiff, whose joints are swollen, let them try Nerviline—the liniment that never fails. 35c at all dealers.

## Ultra Violet Rays Beneficial

Children Thrive in Room Fitted With Special Glass

Interesting results were recorded in a one-month's experiment at a school in Staffordshire, with special window panes, permitting the passage of ultra violet rays, which are unable to penetrate ordinary window glass. Boys in the room fitted with special glass gained three pounds more in weight and a half inch more in height in comparison with those in rooms where the violet rays were excluded.

## RHEUMATIC PAIN AND THIN BLOOD

Liniments of No Avail — The Trouble Must Be Treated Through the Blood

The most a rheumatic sufferer can hope for in rubbing something on the swollen, aching joints is a little relief and all the while the trouble is becoming more firmly rooted. It is now known that rheumatism is rooted in the blood, and that as the trouble goes on the blood becomes still further thin and watery. To get rid of rheumatism, therefore, you must go to the root of the trouble in the blood. That is why Dr. Williams' Pink Pills have proved so beneficial when taken for this trouble. They make new, rich blood which expels the poisonous acid and the rheumatism disappears. There are thousands of former rheumatic sufferers in Canada now well and strong, who thank Dr. Williams' Pink Pills that they are now free from the aches and pains of this dreaded trouble. One of these is Mr. Robt. A. Smith, Mersey Point, N.S., who says:—"Some years ago I was attacked with rheumatism, which grew so bad that I could not walk and had to go to bed under the doctor's care. It is needless to say that I underwent a great deal of suffering. The doctor's medicine did not seem to reach the trouble, so when I was advised to try Dr. Williams' Pink Pills I did so, and after taking them for some weeks I was able to get out of bed. I continued using the pills and was soon able to work, and I have not been troubled with rheumatism since. In other respects also I derived a great deal of benefit from these pills and I think them a wonderful remedy."

Dr. Williams' Pink Pills are sold by all medicine dealers or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

## Old Country Travellers Get Special Service

Canadian Pacific To Provide Through Service To Seaboard

In order to give Old Country Christmas travellers a fast through service to the Atlantic seaboard, the Canadian Pacific will operate from Edmonton, Calgary, Saskatoon, Moose Jaw, Regina, Brandon, Winnipeg and other western points, special tourist sleeping cars to connect with December sailings from West Saint John, N.B. Special trains will also be operated from Winnipeg 10:00 a.m. December 4th, 6th, and 12th. This service will permit passengers to travel from Western Canada to the Old Country with but the one change—at the ship's side.

Special round trip excursion tickets will be on sale to the seaboard (Saint John, Halifax, Portland) December 1, 1926 to January 5, 1927, thus enabling Old Country visitors to enjoy at a minimum expense the maximum of travel comfort. Canadian Pacific ticket agents can give full information and arrange every detail.

Physicians use Minard's Liniment.

## STACON

STOVE POLISH

## Can Create Artificial Fogs

German Chemists Are Said To Have Discovered Method

A method of causing sudden artificial fogs on a large scale has been discovered by German chemists. It is said that the introduction of this new "weapon" may have far-reaching effects on naval and land warfare, causing the enemy to be nonplussed and ships or troops to be withdrawn under cover of mist when an attack is launched. It is reported further that experiments made by the German army are equally promising, the fog created being so dense that it was impossible to see more than two yards ahead.

Many children die from the assaults of worms, and the first care of mothers should be to see that their infants are free from these pests. A vermifuge that can be depended on is Miller's Worm Powders. They will not only expel worms from the system, but act as a health-giving medicine and a remedy for many of the ailments that beset infants, enfeebling them and endangering their lives.

## Scientific Discovery Aid To Physicians

Process Perfected That Makes All Blood Suitable For Transfusions

The time is not far away when blood suitable for use in transfusions can be obtained in bottles at a drug store, Dr. J. L. Yates, Milwaukee, Wis., predicted at the convention of the Interstate Post Graduate Medical Assembly in Cleveland.

Often when a minute's time balances the life of a patient needing a blood transfusion a "donor" with right kind of blood cannot be found, Dr. Yates pointed out. Scientists in Prague, Bohemia, Dr. Yates said, have perfected centrifugal washing process of blood serums which is so profound that it will render suitable even the blood of oxen and sheep, which, if transfused in natural state, would bring almost instant death.

It was deemed practicable that this process will make it possible to buy at a drug store blood bottled up without "characteristics" and ready to match for transfusion.

Mothers can easily know when their children are troubled with worms, and they lose no time in applying a reliable remedy — Mother Graves' Worm Exterminator.

First Little Girl (in quarrelsome mood): "Yah! you haven't got any real parents. You're only adopted."

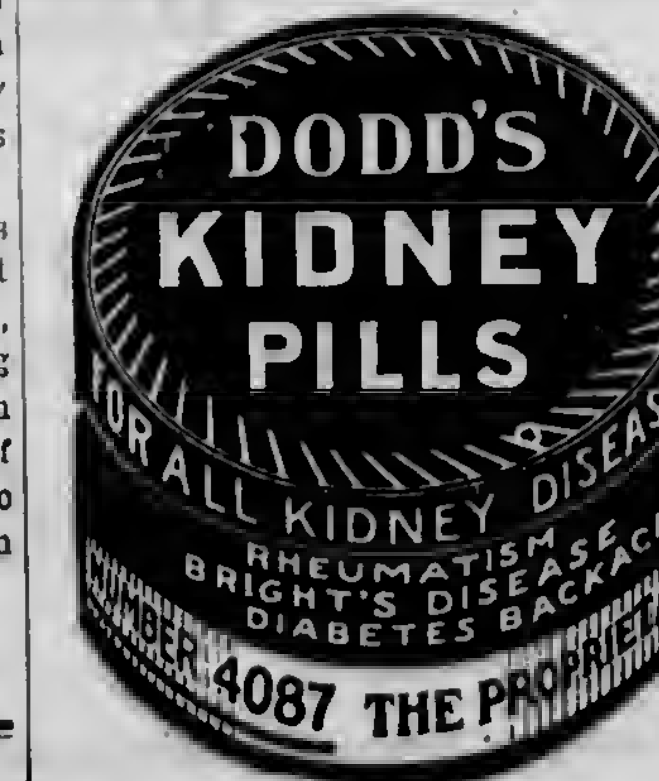

Second Little Girl: "That's so. My parents chose me. Yours had to put up with what was sent."

Lady (discussing her husband) — We've never had more than one row. I give in first, and adn't never give me a back answer since. One o' the strong silent sort, 'o is.—London Punch.

An Oil that is Prized Everywhere.—Dr. Thomas' Electric Oil was put up on the market without any flourish over fifty years ago. It was put up to meet the wants of a small section, but as soon as its merits became known it had a whole continent for a field, and it is now known and prized throughout this continent. There is nothing equal to it.

A live turtle on whose shell was carved the date 1815 was found recently in Connecticut.

Greater London has 2,300 miles of streets and their upkeep costs about \$15,000,000 a year.

## Have Not Solved Mystery

Doctors Unable As Yet To Find Definite Cure For Cancer

The assembly of medical men from many countries who, in America, have been exchanging knowledge, experiences, and ideas with regard to the study of cancer, is to leave us, apparently, without any complete understanding of the disease, and therefore without any definite cure for it. In an agreed statement—the first, probably, to which a hundred doctors have ever subscribed—the congress has assured us definitely that cancer is not hereditary, neither is it infectious nor contagious. So far as its treatment is concerned we are told only what we knew already—that radiology and surgery alone can deal with it, and that only if it is taken at an early stage—but the fact that our ignorance is being brought within narrower limits is in itself hopeful. It narrows the field of research, and thereby it brings us nearer to definite knowledge.

## A Man Of Mystery

Has Spent Over Half Century in Wisconsin State Prison

Old Bill Maxwell has rounded out his fifty-fourth year at the state prison at Waupun, Wisconsin. He is 86 years old, and is spending his last days in the infirmary awaiting death.

Maxwell is a man of mystery and has never spoken unless spoken to. More than half a century ago he killed a man over a woman and a sheriff saved him from being lynched by a crowd that had strung him to a tree. Since then he has refused to ask for a pardon and has expressed a wish that he might die in prison. He has not seen the outside world for more than half a century, has never seen a prison ball game or a movie and has never attended chapel.

## Cold In Head Clogged Nostrils

Ringing Ears and Buzzing Head Noises Quickly and Pleasantly Relieved By Simple Wormwood Treatment

No more howling, spitting or howling, dry tickings, dull headaches or buzzing head noises. Use Green Wormwood Balm in your nostrils, twice a day and you may find goodby to catarrh and trouble.

The pleasant, cooling and soothing fragrance of this old-time Wormwood treatment promptly penetrates all through the air passages of the nose and throat—your clogged nostrils quickly open up—the "choking" noise stops—you breathe through your nose freely as nature intended and your dull old head feels clear and clean!

Put your faith in Green Wormwood Balm and you won't need to stay stuffed up with a nasty cold or catarrh. At all good druggists—at little cost.

## Confidence In Alberta's Future

Recent Bond Sale Put Through On Very Favorable Terms

The Alberta Government has reason to be very much pleased with the bond sale that it has put through. Debentures to the extent of \$6,000,000 have been disposed of. The money is obtained on an interest basis of 4.95 1/2 per cent. These terms are almost as favorable as those which Ontario and Quebec have been able to secure. When it is considered what a difference there usually is between the rate at which money can be obtained in an old and a newly settled country, it must be apparent what confidence exists in Alberta's future.

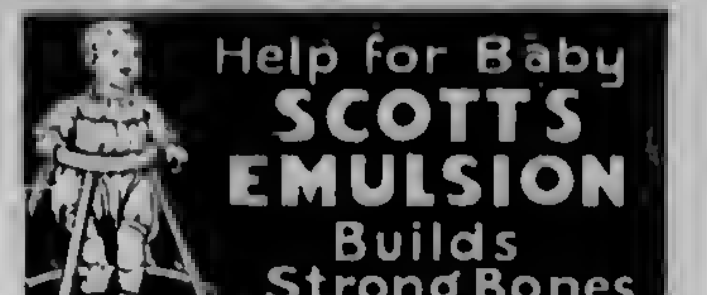

## Milk And Sugar Combined For Cooking

Have you ever noticed how, in making sweetened drinks, a professional always uses a boiled sugar syrup? It is to get that wonderful flavor and consistency that marks a perfect combination of the liquid and the sugar. Many a good cook has vastly improved her recipes by using Eagle Brand Condensed Milk for this very reason. The milk and sugar are thoroughly combined (almost pre-cooked, you might say) so that results are obtainable that could not be expected if you mixed the sugar and milk yourself. Having the milk and sugar already blended is a great advantage. Aside from saving sugar—and the trouble of mixing—there is the certainty of a finer flavor to the dish. The condensed milk combines quickly and easily with all other ingredients—binds them closer together—and gives the recipe a smoother texture. Another advantage of condensed milk is its convenience. One can keep several cans on hand as it keeps perfectly, so there is no such thing as running short, but rather a certainty of pure, fresh milk whenever it is required.

Until they were contaminated by contact with the white man's civilization, the Zulus were the most healthy people in the world, according to Sir W. Arbuthnot Lane, noted British surgeon.

Eight million people are said to dwell in Greater London. There are 11,000 people to the square mile.

Minard's Liniment for Colds.

Help for Baby  
**SCOTT'S EMULSION**  
Builds Strong Bones

**Borden's ST. CHARLES EVAPORATED MILK**  
Much better for every milk purpose. Never fails—always ready. Pure and rich—

Use it wherever the recipe calls for milk.

## Predicts Radio Movies

Are Sure to Come Says Dean of Toronto University

Opening the radio show at Toronto, Brig.-Gen. C. H. Mitchell, dean of the faculty of applied science, University of Toronto, predicted that within the near future there would be a combination of radio broadcasting and motion pictures, by which people will be able to see movies in their homes. In time, people would not only be able to hear operas but would also be able to see the actors and singers as they appeared on the stage.

Minard's Liniment for Neuralgia.

## Making War Difficult

Spirit Behind League of Nations is Helping Says Canon Cody

Addressing the Canadian Club in Toronto Canon H. J. Cody, who recently returned from the League of Nations meeting at Geneva, said: "I do not think Western Europeans will fight again. The great danger is between the white and black and yellow peoples. Everything turns on our attitude toward them in the days to come, but I believe the great spirit behind the League of Nations will by the blessing of God make it increasingly difficult to resort to that futile and fatal method of settling disputes by brute force."

Some men never do anything on time except quit work.

For COLIC AND CRAMPS PAINS IN THE STOMACH There's Nothing Equals

It has been in use for over 80 years; its action is pleasant, rapid, reliable and effectual, and relief comes promptly.

"Don't accept a substitute." The genuine is put up only by The T. Milburn Co., Limited, Toronto, Ont.

## Whooping Cough

Quickly eased and the severe, straining cough controlled. Brings nights of restful sleep and comfort. Chamberlain's Cough Remedy. No Narcotics—25c and 50c

**A BROKEN DOWN SYSTEM.** This is a condition (or disease) to which doctors give many names, but which few of them really understand. It is simply weakness—broken down, as it were, of the vital forces that sustain the system. No matter what may be the causes they are almost numberless; its symptoms are much the same; the more prominent being dizziness, sense of prostration or weariness, depression of spirits and want of energy for all the ordinary affairs of life. Now, what is absolutely essential in all such cases is increased vitality—vigour, vital strength and energy to throw off these morbid feelings, and as night succeeds the day this may be more certainly secured by a course of **THE NEW FRENCH REMEDY, THERAPION No. 3** than by any other known combination. Securely as it is taken in accordance with the directions accompanying it, will not only restore the system, but will also build up a new and more powerful one. **THE EXPIRING LAMP OF LIFE** LIGHTED UP AFRESH—and a new system imparted in place of what had so lately seemed worn-out, used up, and valueless. This wonderful medicine brings sleepless nights, constipations and colics, in either sex; and it is difficult to imagine a disease or derangement whose main feature is weakness, that will not be speedily and permanently overcome by this recuperative essence, which is destined to restore to health everything that had preceded it for this wide-spread and numerous class of human ailments. Sold by leading chemists, or either No. 3 return mail from Dr. L. C. L. Co., Ltd., 11, Victoria Rd., N.W., London.

## Discovers New Hybrid Plant Combining The Advantages Of Both Sweet Clover And Alfalfa

Scientific agriculturists throughout Canada and the United States, first startled and then intensely interested, are now following with close attention research work proceeding at the University of Saskatchewan into the production of a forage plant which apparently combines the advantages of both Arctic sweet clover and alfalfa, and eliminates the disadvantages of each.

The research work began when Prof. L. E. Kirk, in charge of forage crop work in the university's field husbandry department, discovered in a plot of Arctic sweet clover a number of strange plants, bearing evidence of being the result of a cross between Arctic and alfalfa. This was in 1924, and since that time the work has been proceeding along quietly.

It will be a long time yet before any definite announcement can be made regarding the value of the new plant, but agricultural authorities at the university find some cause for optimism in the result of their research to date.

The far-reaching importance of the discovery is explained by Dean W. A. Rutherford, head of the Saskatchewan College of Agriculture, or, as it is less officially known, the agricultural college of the university.

From year to year, as the prairie soil is used again and again for wheat production, the nitrogen content of the soil, without which wheat production is a practical impossibility, is becoming more and more depleted. As Dean Rutherford expresses it, part of the nitrogen of the prairie soil is annually shipped east with the wheat.

Unless the nitrogen can be replaced, the great plains area, the name given by agriculturists to the wheat-producing areas of Canada and the United States, will eventually reach the stage where wheat can no longer be grown.

Leguminous plants have been cultivated by the scientific agriculturists to replace the lost nitrogen. Legumes store up nitrogen about their roots and this nitrogen remains in the soil for succeeding plants of any species, including wheat, to use. Sweet clover and alfalfa, the supposed parents of the new plant which is the centre of interest in the foliage crop branch at the university, are both legumes. Both can give back to the soil the precious nitrogen taken from them by wheat crops.

The vital importance of legumes in the production of wheat crops is thus apparent.

Both Arctic sweet clover and alfalfa, however, have objectionable characteristics. Conditions of Saskatchewan agriculture make Arctic sweet clover preferable to alfalfa as a rotation legume, although wherever and whenever the latter plant can be successfully need in a crop rotation, it is the better of the two, according to Dean Rutherford. Both alfalfa and Arctic, in addition to replacing nitrogen, supply excellent feed and pasture. Alfalfa seed is quite expensive.

An entirely new avenue of agricultural possibilities is opened up through the discovery of the plant and the progress made to the present in research. Whether the end of the avenue finds agriculture immeasurably benefited from a practical as well as scientific point of view, or whether the research work results in disappointment cannot yet be conjectured.

The discovery of the new plant occasioned considerable surprise in the agricultural world, not only from a realization of its possible practical values, but from the very fact of the apparent cross between Arctic clover and alfalfa—two greatly different species of plants.

Just about the time Prof. Kirk made his discovery, similar discoveries were made independently in Manitoba and North Dakota. Research work is also under way in those places.

### How He Acquired Scotch

An English visitor found himself seated next to a distinguished Maori at a public function. In the course of conversation the Maori remarked: "You may be surprised to hear that I have Scottish blood in my veins." "I am, indeed," replied the Englishman, "How is that?" "Well, as a matter of fact, my grandfather had a Scottish Presbyterian missionary for dinner!"

Japan has caste as well as India. The caste consists of 2,000,000 to 3,000,000 persons who are untouchables, or pariahs, tainted not by disease but by misfortune of having been born into the lower caste.

Australia is the only country known to be entirely exempt from hydrophobia, due to the rigidly forced quarantine.

W. N. T. 1633

### Feeding Young Pigs

#### Ill-Balanced Rations Have Marked Effect On Future Development

Proper feeding runs parallel with correct breeding in the raising of swine. Mr. C. H. Rothwell, Dominion Animal Husbandman, in pamphlet No. 74 of the Department of Agriculture at Ottawa, on "Breeding and Feeding of the Market Hog," ventures to suggest that it may almost be safe to claim that while at least a very few generations type itself may be modified by the feeds fed and the system of feeding followed, ill-balanced rations, injurious substitutes, deficient rations, over-or-under-feeding, lack of intelligent understanding of nutritional requirements generally, Mr. Rothwell points out, all exert a powerful influence during the early growing period as affecting future development. The foundation for profitable raising of swine depends largely, as the Dominion Animal Husbandman further says, "upon the condition to which the feeder is able to bring his young pigs at the age of three months," which is really the important period of the life of the animal, and also the time when the hog man shows his true skill. The pamphlet, which can be had at no cost by applying, postage free, to the Publications Branch of the Department at Ottawa, proceeds to deal with the feeding of the hog and, at great length, with the feeding and care of the brood sow.

### Keeping Cost Of Horse Labor Low

#### Having Only Horses Enough To Do Work Required

By using proper machinery, correct hitching and by keeping only the number of horses that can do the necessary work and be used a larger number of hours, the cost of horse labor on the farm may be kept low. Lower cost of crop production results in higher returns to the farmer.

These facts are emphasized by farm economists at South Dakota State College in reviewing a recent preliminary report. This report shows that the cost of horse work varied from 6 cents an hour to 15.5 cents an hour, with an average on all the farms being 11 cents.

The farmers who kept horse costs low, all worked each horse owned over 1,000 hours during the year. One man worked his horses 1,235 hours each, nearly twice as much as on the farm previously mentioned where costs were high, and there was little difference in appearance of the horses at the end of the year.

Horses can't be worked, of course, unless there is something for them to do which brings up the old but important point of diversification. A variety of crops furnishes the basis for using horses more days during the year.

### Using Sunlight As Fuel

#### Theory of Heating Engineers Worth Trying Out

Heating engineers have discovered new possibilities in sunlight as a means of heating the home, and are experimenting with the feasibility of building glass roofs. By providing houses with glass roofs, properly insulated, it is believed that great quantities of fuel can be saved during the winter months. Doubtless of the theory are referred to the sunny bay window of the average house on a winter day where the sun works without scientific assistance.

### Prohibition In U.S.

Dr. William J. Mayo, of Rochester, Minn., attending the clinical congress of the American college of surgeons at Montreal, stated that he believes prohibition has come to stay in the United States. His opinion, as stated in an interview, is that by a slow process of education a new generation will grow up, abstemious in habit.

### The Status Quo

"Brederlin," we must do something to remedy de status quo," said a Negro preacher to his congregation.

"Budder Jones what am de status quo?" asked a member.

"Dat, my brudder," replied the preacher, "am de Latin for de mess we're in."—Literary Digest.

Human hair grows at the rate of eighteen one-thousandths of an inch a day. The life of an individual hair is estimated at about six years.

Police Constable Nichols of London is among the tallest policemen. In a "Bobby's" helmet, Nichols measures over eight feet.

### Map Of New Lake Area

#### Mapping a Hitherto Unmapped Area Northwest Of And Adjoining Red Lake

A few weeks ago it was announced in the press that the federal authorities were engaged upon a mapping program covering the region in the vicinity of Red Lake. In accordance with this mapping program a provisional map of the Red Lake district itself had been issued to meet the urgent need for the presentation of authentic topographic information; and the subsequent publication of map sheets lying on all sides of the Red Lake region was provided for. Two of these projected sheets were issued during the past few weeks, namely, the Lac Seul sheet and the Point du Bois sheet, lying respectively to the south-east and the south-west of Red Lake, and north from the main line of the Canadian National railways. The mapping program has been carried on by the Topographical Survey, Department of the Interior, in co-operation with the Survey branch of the Department of Lands and Forests, Ontario, and the Royal Canadian Air Force.

A third sheet is now ready for issue to the public. This is known as Carleton Lake sheet and comprises an area lying northwest of and adjoining Red Lake, included within latitudes 51 deg. and 52 deg. and longitudes 94 deg. and 95 deg.

These sheets are published on the scale of four miles to the inch. They are issued in folder form for convenience in carrying in the pocket and may be obtained for the nominal fee of fifty cents by writing the Topographical Survey, Department of the Interior, Ottawa. They are also issued in plain form, unfolded, for which the fee is twenty-five cents.

### Likes Western Canada

#### Former Montana Farmer Finds Ideal Conditions In Alberta

William Wagner, of Vegreville, Alberta, came from Missoula, Montana, in 1902, with \$1,000 capital with which he bought 160 acres of unimproved land. He now has a farm of 1,120 acres worth \$45,000.

"I like Alberta better than any other place I have lived," said Mr. Wagner in a recent interview. "I would advise farmers in the United States to come to Canada if they want to get good quality land at a low price, land that is capable of producing big crops. I have found since I came to Western Canada somewhat similar to that of Montana, that the school and other desirable facilities are equally good and that the taxes are considerably lower. There is no personal property tax on farmers' property in Western Canada."

Mr. Wagner says he finds a ready market at good prices for all he can produce, the roads are fairly good everywhere, and there is every convenience essential to the comfort and well-being of a farm settler, such as telephones, rural mail delivery, radio, churches and schools.

### Kaiser Plans To Return

The former German Emperor William, the Doorn correspondent of News of the World says, is resolved to return to Germany next July, when the German law excluding him expires. Princess Hermine, his wife, is at Oels and preliminary arrangements are being made for William to reside at Homburg.

### British Students Work on Harvest

We had a wonderful time and were treated well everywhere. There is not a single complaint and all the boys are tremendously enthusiastic over the country. We enjoyed the work in the harvest fields and most of us have a little money to take back with us, despite lost time by unfavorable weather.

That is the verdict of the thirty students of Oxford University and Wye Agricultural College who returned recently to England on Canadian Pacific liner Montclair. Having in age from 18 to 25 they went out to Saskatchewan

### B.C. To Form Cattle Pool

#### Stock Raisers Will Organize With Head Office at Vancouver

In an effort to obtain better prices and improved marketing conditions, British Columbia stock raisers have decided to follow the lead of Alberta and other prairie provinces and organize a selling agency for their cattle and live stock, with the head office to be in Vancouver. This step was decided upon recently at the most representative gathering of stock raisers ever held in the province, at Kamloops.

The working system of the Alberta pool was explained by A. B. Claypool, of the Alberta Live Stock Growers' Agency, Calgary, who believed that it would be possible for cattle raisers of the coast province to amalgamate with the prairie pooling organizations.

After N. Curtis, of the Dominion Government stock yards at Edmonton, had reviewed the history of the yards, and expressed the belief that the establishment of similar facilities in Vancouver would not prove practicable, the resolution providing for the formation of the subsidiary organization was put to the vote and enthusiastically passed.

The new body will be known as the British Columbia Stock Raisers' Selling Agency.

### Farm Products Worth Millions

#### Computation of Value of Saskatchewan Crop For 1925

Grain and field crops and other products of the farm including livestock gave Saskatchewan farmers in 1925 assets totalling at \$531,506,180, according to the annual report recently issued by R. W. Neely, statistician for the Provincial Department of Agriculture. Computation of the 1925 assets is made up as follows: grain crops, including wheat, oats, barley, rye and flax, valued at \$351,990,000; field crops, including peas, beans, mixed grains, potatoes, roots, corn, hay, clover, alfalfa and other crops, valued at \$12,687,000; farm products, including butter, milk, cheese, ice cream, wool, game, furs, garden products, poultry and products, valued at \$25,017,180; livestock valued at \$125,112,000.

### Heavy Yields In Alberta

#### Sixty Bushels and Over of Wheat To The Acre Is Reported

J. A. Anderson, of Olsen Creek, Alberta, recently moved his threshing outfit to the district northeast of Grangon, and the wheat he has been threshing has run from 55 to 62 bushels to the acre.

On the farm of George Miller in the same district 5,042 bushels were put through the threshing machine in 12 hours, which is believed to be a record for one day's threshing in the province, the grain averaging 60 bushels to the acre.

### Ontario Honey Wins

Honey from Ontario, in competition with exhibits from all parts of the world, was awarded first and second prizes at the British Dairy Show held recently in London, England, according to a cable received by the Ontario Honey Producers' Cooperative Ltd.

The growing craze for walnut furniture is slowly denuding England of its picturesque walnut trees.

A campaign to abolish automobile racing in Germany is rapidly gaining ground.

## High Reputation Of Canada's Royal Canadian Mounted Police Force Is Being Fully Sustained

### Feeding And Fattening Sheep

#### Information Gleaned From Feeding Test Carried Out At Lacombe

In a feeding test carried out in Alberta, and which is recorded in Bulletin 68 of the Department of Agriculture at Ottawa, dealing with sheep raised in Central Alberta, between oat green feed and lowland hay for fattening ewes, the results proved very much in favor of lowland hay.

Another test was conducted to ascertain the best roughage for feeding shearing wethers in winter. Eight different kinds of roughage were employed, namely, alfalfa, upland hay, slough hay, cut oat green feed, cut oat straw, timothy hay, urea-treated lowland hay, with one lot fed on cut oat green feed. Whole oats were fed to the first eight of nine lots of wethers, there being ten head in each lot.

As pointed out by the authors, Superintendent F. H. Reed and L. T. Chapman, assistant, of the Lacombe, Alta., Dominion experimental station, two conclusions are evident from elaborate data given in the bulletin, first, that home grown roughages made good gains and made the most money; secondly, that a grain supplement is necessary for fattening wethers. The second point is brought out very forcibly in two of the lots, one of which fed cut oat green feed with oats gave a profit of \$1.04 per head, while the other, fed no grain, furnished a loss of \$1.28 per head. Another lot which received cut oat straw with oats showed even a greater profit than the first-mentioned.

### Trees Spreading In West

#### Within A Few Generations There Will Be No Treeless Prairies

Mapping the spread of trees in the Prairie Provinces, with the object of ascertaining at rate at which that spread goes on, is one of the latest activities in which Prof. V. W. Jackson, of the Manitoba Agricultural College, and other authorities on arboriculture are now engaged.

The mapping is being done in connection with a systematic campaign to have more of the prairies covered with trees than is at present the case, and rural development.

So far, the spread of the poplar has been the most remarkable to be noted. Prof. Jackson points out. All through Saskatchewan "poplar islands," are forming and increasing in size, and it appears that the poplar spread all the more rapidly as new land is broken for agricultural purposes. It is only a matter of a few generations until there will be no such thing as a treeless stretch of prairie of any great extent, Prof. Jackson states.

While the poplar is easily first in the way it adapts itself to the conditions of the prairie, satisfactory results are also being obtained with oak and elm. Acorns which have been sent to Red Deer, Alta., have germinated and the saplings give promise of developing into lovely trees. Elm seeds have also been planted in Alberta and likewise germinated. The progress of these saplings is being closely watched.

### Seeking "Death Tree" In Africa

#### Head Of British Expedition Believes It Contains Valuable Drugs

Seeking the "Death Tree," an expedition has left Port Elizabeth for the heart of Africa. The "Death tree," which grows somewhere in Central Africa, gives off a powerful odour which kills any one inhaling it, and travellers who sleep anywhere near it never awaken. Mr. Alexander Clive, at the head of the expedition, believes that the tree contains valuable drugs, and hopes to obtain specimens to take to London, where he expects to arrive in eighteen months.

### Many Motor Cars

Canada, land of great distances is peculiarly well adapted in many respects for extensive motor transport growth. More than 200,000 cars will be produced in Canadian plants this year. Car registration exceeds 800,000 and is steadily growing. Canadians are keenly alive to the benefits of motor transportation, and with the marked highway improvements in many parts of the country it will only be a short time when the number of automobiles will be doubled.

### Alberta's Good Crop

That the probable average yield of wheat throughout Alberta will be 29 bushels to the acre on 5,275,000 acres, giving a total yield of 119,225,000 bushels is the forecast of the eleven crop report issued by the provincial Department of Agriculture. This will be the second largest crop of wheat in the province's history.

### The Newest Word

Ballyhoo, meaning extravagant advertising, has become a member in the society of good speech and will appear in the next edition of the New Standard Dictionary.

Many a man who isn't a coward is afraid of consequences.

Reports from lonely outposts in the Canadian Arctic islands show that the high reputation of Canada's mounted police force is being sustained. From the stations of the Royal Canadian Mounted Police on Baffin, Devon and Ellesmere Islands come stories of single patrol through the Arctic winter in bleak, inaccessible sections of the north. Two of these journeys made by members of the mounted police are given special note. The first, undertaken by Staff Sergeant A. H. Joy, covered a distance of 975 miles and occupied forty days. The second, made by Sergeant J. E. F. Wright, accounted for 1,285 miles of travel between February 15 and May 2, of the present year. The latter patrol was made for the purpose of investigating the alleged murder of an Eskimo several years ago.

The first of these patrols is regarded as a notable piece of travel. Staff Sergeant Joy travelling alone save for an Eskimo dog driver and hunter, from Craig Harbor around the southern and western shores of Ellesmere Island and crossed Church Sound to Axel Heiberg, the large island lying to the west of Ellesmere. Heiberg has been regarded as one of the most inaccessible of the Canadian Arctic islands. The report mentions that both Sergeant Joy, and his companion suffered from snow-blindness while on Axel Heiberg. The same officer, while descending a glacier, ran into a network of deep crevasses masked by light snow. He discovered the existence of the crevasses when his dog teams broke through. One team broke, and the dog was not heard of again.

Sergeant Wright's long patrol took him through a country which is so little known that the latest maps proved to be inaccurate as to the situation of several large lakes which contain traversing regions unknown to his Eskimo companions. He visited a number of small bands of Eskimos and found much destitution among them. He was able to assist in relieving their distress.

In addition to these two long patrols, numerous others are reported. The mounted police have now patrolled the whole of the east coast of the southern half of Ellesmere Island. They Heiberg; the northern and southern coasts of Devon Island; and the whole of the north and west coasts of Baffin Island as well as part of the east coast. The distance travelled by the two detachments on Baffin Island was over six thousand miles, while on Ellesmere Island a distance of 3,200 miles was covered. These figures are exclusive of ground covered in hunting trips.

Thus the work of exploring and patrolling the north goes on. Through the dangers and hardships of the northern winter, the mounted police continue to push their way farther and farther into the almost unknown sections of Canada's Arctic continent. And down in the temperate zone, the public is informed that the winter in the northeastern Arctic was one of "great activity."

### Boosted Price Of Tea

#### Thirty Francs Is Price In Paris Restaurant Because Spoons Were Stolen

Thirty francs for a cup of tea charged in one of the chic restaurants in the Bois de Boulogne has caused many protests from customers. The tea is very weak and no spoon is served with it.

"I don't mind paying a dollar for a cup of sweetened hot water," an American remarked to the waiter recently, "but at least give me a spoon to stir up the sugar with."

"The absence of spoons is the reason why the tea costs thirty francs," came the reply. "We had a thousand spoons at the beginning of the season, we have about fifty left. Souvenir hunters took the rest. We only use spoons now to customers who know."

### Multiple Wives

Anyone taking more than one wife in Soviet Russia is liable to a fine of \$250 or imprisonment at hard labor under supplementary marriage laws approved recently. Exemptions are provided in the cases of those who acquired multiple wives prior to the enactment of the present law.

## Canada's Great Mission

To Draw United States Into Working Fellowship With Empire

The ten millions of Canadians, it thus will be seen, under the old flag, more influence than any equal number of people elsewhere. Above all, Canada amongst the self-governing nations of the Empire has a position and a mission like no other. For three times and miles her open frontier marches peacefully with that of the American Republic. If she can rise to the highest view of her destiny she will work deliberately, steadily, to harmonize her intimate neighborhood to the United States with her membership of the British Empire, and to draw the two systems into a working fellowship which would lead the world—London Observer.

BLOUSE 1411 SKIRT 1033

## The Two-piece Frock Holds Its Own

Superbly simple, as are all of the sports frocks—and becomingly youthful. A charming version of the two-piece mode, developed in striped velvet, the outstanding fabric of the season. The student collar—the continuous row of covered buttons that fasten with loops, and two smartly placed pockets are details that make this costume not only correct for sports, but smart and appropriate for street or house wear. The skirt is joined to a body lining and boasts inverted plaits in the centre front and side seams. The Blouse No. 1411, is in sizes 34, 36, 38, 40, 42 and 44 inches bust. Size 36 requires 24 yards 39 inch material. The Skirt No. 1033, is in sizes 34, 36, 38, 40, 42 and 44 inches bust. Size 36 requires 15 yards 39 inch material; lining 1 1/2 yards 36 inch, 20 cents.

Our Fashion Book, illustrating the newest and most practical styles, will be of interest to every home dress-maker. Price of the book 19 cents the copy.

## Tales Of Heroism

Radio Operator and Engineers and Firemen Stay With Sinking Ship and Perish

Tales of heroism on the part of the engineers and firemen and the radio operator are related by the twelve survivors of the crew of 35 of the British freighter Eastway, which went down off Bermuda in the recent hurricane.

The radio operator, R. James, was at his post, repeating his wireless call of distress and went down with his ship. Likewise, the engineers and firemen refused to make an attempt to enter the single remaining lifeboat and went to the bottom with the craft.

The twelve survivors who were picked up by the British schooner Letitia, have been brought to St. Georges by that vessel.

The rescued men say they had been for seventeen hours without water and but little food when the Luciline ran alongside and picked them up. They report that while they were at the mercy of the waves they were passed at close range by a large steamer which ignored their rockets and other signals of distress.

## Englishman Has Peculiar Job

Is Last Exponent of Ancient Art of Ox-Roasting

Fred Tyler, Stratford-on-Avon, the oldest surviving exponent of the ancient English art of ox-roasting, was appointed official ox roaster at the Manchester Civic Week Pageant.

This will be the 120th occasion in 40 years in which Mr. Tyler has been called upon to perform at public celebrations, during which time he has roasted 92 oxen and 30 pigs.

"I am at getting 5,000 sandwiches made from each ox," he said. "From the moment the fire is lit until the last slice is cut should not be more than ten hours. To make the job look really nice I always leave the horns on during roasting and curl the tail of the ox. When it revolves on the spit in this condition many people think that the animal is being roasted alive, and they rush off to the police to make complaints of cruelty."

The largest ox roasted by Mr. Tyler was a 14 cwt. animal at the coronation celebrations at Newport, Monmouthshire.

Tobacco is being grown for market in a valley in British Columbia which corresponds in latitude to the northern part of Newfoundland.

There are forty direct telephone lines between London and continental Europe. These carried upward of 90,000 calls last year.

Sunday School Teacher—Now, of what promise does the rainbow remind us? Boy—It ain't gonna rain no more.

The more money a man has the more he is abused and the less he cares.

A college education never hurt anybody who was willing to learn something afterward.

When a woman wants to annoy her husband she tells him she is going to clean house.

## A Permanent Agriculture

By C. W. Peterson

Canada faces a great social problem, namely, to make country life much more attractive than it has been in the past. Great progress has been made in that direction during the past decade. The motor car, good roads, the rural telephone and mail delivery, radio—all have made conspicuous contributions. The farmers through their co-operative institutions and by their own, unaided efforts, have taken mighty strides towards increased, rural prosperity and contentment. The urban people of Canada should, however, assiduously cultivate "agricultural mindedness" and be actively sympathetic towards the efforts of the countryside to live the fuller life. That way only lies the path leading to a permanent agriculture. At present rural life is two generations behind the urban community in living conditions and the spectacular drift to the cities constitutes a demonstration against present inferior conditions of farm life compared with urban existence.

The sarcastic ranting about the "auto-riding" farmer and "back-to-the-buggy" should cease. We should, on the contrary, rejoice over every new farm auto and be thankful for every additional farm home getting away from the agricultural slum status through the adoption of modern sanitation. Unfriendly criticism of this nature has its moral effect upon the countryside and does its part in encouraging the drift from country to town, inevitably followed by seasonal unemployment with its concomitants—a lower wage scale and the further expatriation of our splendid, young manhood, after bearing the not inconsiderable burdens of the unproductive period and the cost of education.

Aside from this, the present detached, and often impatient, attitude of town towards countryside cannot fail to further intensify the notorious political drift away from rural problem and towards centralization upon the more spectacular, urban issues, incidental to the complex civilization of modern times. In a preponderantly agricultural country such as ours, this world-wide tendency should be curbed at any cost and a more sympathetic understanding developed. In deed as well as word, between urban and rural interests, Canada has much to learn in that direction. With a new slant on this important problem and a genuine desire to lift agriculture up to its proper position, Canada can with confidence look now forward to end their fortunes in with this country and with every hope of success.

## British Papers Merge

Daily Sketch and Sunday Herald Now Under One Control

The latest of the many newspaper deals on the large scale which have taken place in London within recent years, brings the Daily Sketch and the Sunday Herald under the control of what is known as the Berry group of ownership. The principals in this group are Sir William Berry and Mr. J. Gomer Berry, the concern as a whole being a public company with the title, Allied Newspapers, Limited.

This company now owns all the newspapers formerly under the chief control of the late Sir Edward Hulton, with the exception of the Evening Standard, of which Lord Baverbrook is the chief proprietor.

Buttons (arousing the guests) —Get up! Get up! The hotel's affire! Thirty Scot—Right, laddie, but if I do, mind ye, I'll no pay for this bed.

In the completed Rugby wireless station, England has at last a means of communicating with British vessels sailing on any of the seas.

Good taste and good health demand sound teeth and sweet breath.

The use of Wrigley's chewing gum after every meal takes care of this important item of personal hygiene in a delightful, refreshing way—by clearing the teeth of food particles and by helping the digestion.

The result is a sweet breath that shows care for one's self and consideration for others—both marks of refinement. Ask for CG38

## Mussolini Escapes Death At Hands Of A Would-Be Assassin

Bologna, Italy.—An 18-year-old youth who attempted to shoot Benito Mussolini was himself stabbed and beaten to death by an infuriated mob.

Mussolini escaped injury. The assassin's bullet missed passing through the Premier's chest by the fraction of an inch. It actually ripped both sides of his coat and cut the cash of the Order of St. Maurice and St. Lazarus.

The youth had pressed forward as Mussolini was seated in his automobile on leaving the Stadium where he had attended the Congress for the Advancement of Science, and was ready to fire a second shot. Carabineers and Fascists threw themselves upon him as he was in the act of sending a second bullet at the Premier.

Within a minute or two of his attack on Il Duce, the body of the youthful assassin was being dragged along to his death a crumpled and inert mass, by strong-armed Fascists through a screaming, milling sea of humanity.

Later at the police station, where the body was taken, 14 knife wounds were found and marks of strangling on the throat.

It would be impossible to create a more dramatic setting than that which surrounded the attempted assassination. It was about 5.40 o'clock in the evening and the 50,000 people who had assembled at the stadium stood behind lines of Carabineers as Mussolini passed.

The Premier's car had entered the main thoroughfare, the Via Indipendenza, when a shot rang out above the roar of the cheering of the masses.

A dead silence; then all eyes were focussed on the youth, who stood bending forward with the revolver in his hand. The next thought was for Mussolini, and when the crowd saw the Duce calm and obviously unhurt they closed like the jaws of a gigantic animal upon his assailant. Savage hands reached for him and he was pounded and beaten and stabbed until life was extinct.

Great crowds blocked the path of the Premier's car, almost overturned it in an attempt to approach close enough to find whether he was hurt. When a passage was finally cleared, the automobile proceeded rapidly to the station. There Mussolini showed not the slightest sign of nervousness.

### Pool Headquarters In Regina

Regina.—The headquarters of the Wheat Pool will remain in Regina. This decision was reached Friday evening, and the matter was disposed of by a substantial majority in favor of leaving the headquarters here. This was the official statement issued by A. J. McPhail, president of the Saskatchewan Co-operative Wheat Producers Ltd.

### September Fish Harvest

Ottawa.—Canada's sea harvest in September netted fish to the value of \$3,912,557. On both Atlantic and Pacific coasts a total of 166,170,500 pounds of sea fish were caught last month, an increase of about 12,000,000 pounds over September, 1925. On the Pacific coast the halibut catch increased while the salmon catch went down.

## Will Unite East And West

Premier Gardiner of Saskatchewan Has Faith In Future of the H. B. Road

Saskatoon.—Discussing the effect of the completion of the Hudson's Bay Road, at the banquet tendered by the board of trade here, Premier Gardiner said in part: "To Saskatchewan completion of the Hudson's Bay route means the opening up of that great strip of productive territory between Saskatchewan and Churchill rivers. It means the cutting of the distance to Liverpool by a thousand miles during four or five months of the year and provides a fourth outlet for the growing production of Western Canada. Just as the opening up of the cropped area of the West added to the national prosperity, so will it increase through the building of the Hudson's Bay line. To Canada it promises assistance in the solution of the problems of the Maritimes, which are the most disconcerting questions confronting Confederation today. The Maritimes, with their coal, iron and timber, can develop a manufacturing industry based upon the existence of these two minerals in one area, which will give new life and hope to the people of that area, because the Hudson's Bay route and storage at the Bay will place them at the front door to the Western markets, making it possible for them to compete with the central part of Canada and the United States on equal terms. In addition to carrying the broadening effects from the Rockies to the Hudson's Bay, this road should unite East and West as no other transportation undertaking has done, thus encouraging national aspirations in Canada.

"The national characteristics of the British race will cause our doubts to disappear in the interests of Empire when the first season of operation in the Bay has passed into history. Those seamen whose ancestors have braved the dangers of the straits for two hundred and fifty years, those seamen whose ancestors boast the names of Drake, Forbisher and Hawkins, those seamen upon whose faith in the navy more than once the future of the Empire has rested, those seamen whose ancestors fought two naval battles in the Bay in the eighteenth century, those men will find ways and means to stretch the four months' season set down by tenderfoot engineers into six or more months. All the conveniences of this age are in their favor, and they would be unworthy sons of worthy fathers did they not see in the Hudson's Bay route not only the interests of Saskatchewan, the interests of Canada, but the interests of an Empire more closely knit together by a trade route the shortest to the Orient and unmistakably British."

Regina.—The headquarters of the Wheat Pool will remain in Regina. This decision was reached Friday evening, and the matter was disposed of by a substantial majority in favor of leaving the headquarters here. This was the official statement issued by A. J. McPhail, president of the Saskatchewan Co-operative Wheat Producers Ltd.

McPhail, president of the Saskatchewan Co-operative Wheat Producers Ltd.

### Scalped By Propeller

Vancouver.—Completely scalped by the propeller of the seaplane which plunged into English Bay here, C. C. Smith of the Dominion observatory at Ottawa will bear marks of the accident for life. It was said last night at the hospital where he and the two other persons seriously injured in the wreck are recovering.

## Saskatchewan Wheat Pool

Will Continue Operation of the Coarse Grain Pool

Regina.—Greater facilities for the handling of a greater production of pool wheat was the key note of the annual report of the directors of the Saskatchewan Wheat Pool at the second annual meeting here.

It was revealed in the report that 129,713,876 bushels of wheat delivered to the pool during 1925, an increase of some 79 and a half million bushels over 1921. In the report it was stated that although the acreage for coarse grains had not reached the quota provided under the Grower's Agreement, the continued signing of contracts had warranted the continuance of operation of the Coarse Grain Pool.

The membership of the Pool as recorded in the report is 78,785, representing 10,492,433 wheat acres under contract. On this basis, it is estimated that the pool has now under contract 79 per cent of all the seeded wheat acreage in the province. Based on the provincial government's estimate of seeded acreage, the percentage of the various grains under contract is as follows: oats, 38 per cent; barley, 36 per cent; flax, 60 per cent, and rye 37 per cent.

## Produce Films In B.C.

Canadian Moving Picture Concern to Establish Film Production Plant

Victoria, B.C.—Famous Players Lasky Corporation are to enter British Columbia to establish a film production plant. It was announced today in connection with the incorporation, which officials of the company put through at the parliament buildings this morning, of the \$15,000,000 Famous Players Canadian Corporation Ltd., of Toronto and Vancouver, as an extra provincial organization entitled to undertake business here.

The concern is now branching out into an international organization and besides producing in Canada, will extend its production in England, it was explained.

## Will Inspect Port At Prince Rupert

Party From Edmonton is Looking Over Grain Handling Facilities

Edmonton.—The province of Alberta, the city of Edmonton, the Edmonton board of trade and the Edmonton press are represented in the party of four which went to Prince Rupert, in response to the recently issued invitation of the board of trade and civil government of the coast city, that a representative delegation from Edmonton inspect the port of Prince Rupert, and the grain handling facilities of the port.

### Gets Life Lease of White Lodge

London.—King George has presented a life lease of the Royal residence, White Lodge at Richmond, to Lord Lee of Fareham, who gave Chequers in 1923 as a country house for British premiers. White Lodge was built by George I. Its last occupant was the Duke of York.

## Saskatchewan Cabinet Changes

HON. J. C. GARDINER

Premier of Saskatchewan, who announced the re-arrangement of the cabinet, due to the retirement of Hon. A. P. McNab.

## Reasons Canada Gets Unsuitable Emigrants

System of British Dole Responsible Says Sir Percival Phillips

London.—Introducing a series of articles by Sir Percival Phillips on the expansion of Canada and trade prospects there, The Daily Mail in an editorial says the progress of Canada is watched with sympathy and satisfaction by Great Britain.

"Today the Canadian people are our best customers. The custom of each Canadian is seven times as valuable as the custom of an American citizen. One dark spot in our relations with Canada is the difficulty of supplying her with suitable emigrants. Unless the system of doles and reckless outdoor relief schemes in British stops there will be risk that Canada, like the United States will be swamped with a polyglot immigration from central and Eastern Europe.

## Thousands Hurt And Killed In Armenia

Near East Relief Caring For Victims Of Earthquake

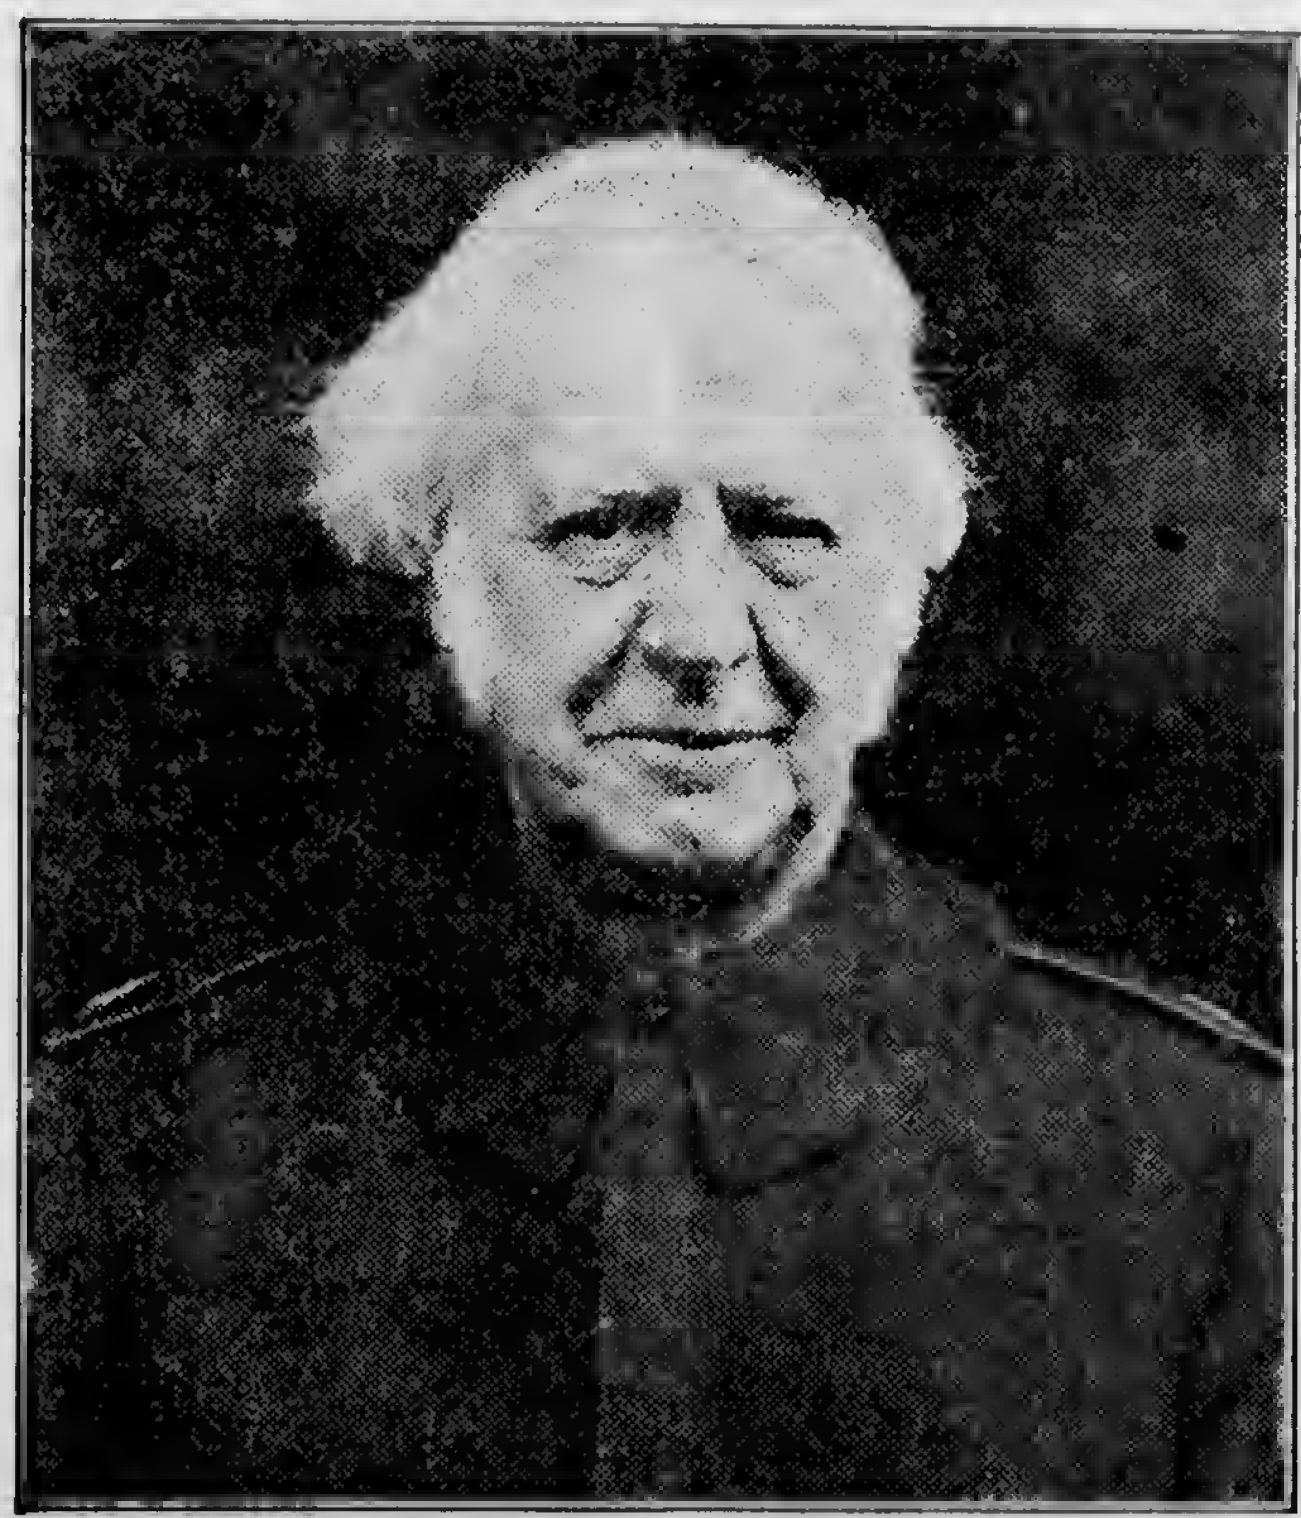

Constantinople.—Soviet officials here received reports from Erivan stating that more than 5,000 persons were killed or injured in the recent earthquake in Armenia. The villages of Akchik, Yenibayazine and Ditchmez, were destroyed. Churches along the line from Ghenru to Erivan suffered heavily.

The Near East Relief is caring for the homeless and the Trans-Caucasian Federation has sent 50,000,000 rubles for the relief of the sufferers.

It is believed that Turkish territory was not touched by the quake since no reports concerning it have been received from the Turkish district near Armenia.

### Pacific Cable Being Laid

Vancouver.—The cable ship Dominica has started laying the shore end of the new Pacific cable between this station and Fanning Island.

Salvation Army Head For Japan

For the first time in the history of the Salvation Army, a native of Japan will be appointed Commissioner of the Army. The official appointment was made by General Booth, head of the Salvation Army, who sailed from Vancouver at the end of September on the Canadian Pacific liner Empress of Canada, to perform this duty. During his sojourn in the Orient the General will visit Japan, China and Korea.

General Booth arrived in Canada on the Canadian Pacific liner Empress of

France about the middle of September but his visit to this Dominion was short. He proceeded directly across Canada by Canadian Pacific lines to Vancouver. While there awaiting the departure of the Empress of Canada, General Booth, true to his long established custom, refrained from eating any food for two days before sailing. He contented himself with sipping a little hot water, as he never touches food for two days prior to an ocean voyage.

## Economic Pressure May Assist In Settlement Of Coal Strike In Britain

## Two Thousand Buffalo Will Be Slaughtered

Necessary to Reduce Herd at Wainwright National Park

Ottawa.—Two thousand buffalo now in Wainwright National Park are to be killed by orders of the department of the Interior. In the past three years the buffalo population of the park has increased so rapidly that it has been found necessary to resort to killing some of the animals and shipping others to the Wood buffalo park where they are able to live off the land.

In Wainwright park there is only room for about 8,000 head. In 1924 some 2,000 had to be killed. In 1925, about 2,000 were sent north and 2,000 are to be killed. It is understood that tenders are being called for slaughtering contracts.

"The slaughtering of 2,000 buffalo will mean that Canadians once more will have the chance to buy fresh buffalo steaks. The Government does not interfere with distribution and in 1924 it was a popular dish as far East as Montreal.

## Proposal Does Not Please Mine Owners

Not Friendly Toward Arbitration on Wages to End Coal Strike

London.—Labor is claiming that financial pressure is being brought to bear on the British government to interfere once more to get the coal strike settled, and some of their leaders are openly claiming that Montagu Norman, governor of the Bank of England, is prepared to finance the resumption of work, provided there is arbitration on wages but not on hours of labor.

"Emperor" Cook will not listen to such a proposal, and the owners do not seem very friendly toward it. Meanwhile it is understood that Premier Baldwin is not willing to intervene unless practical proposals are placed before him and his government by the miners.

### Canada's Trade Expenses

Ottawa.—Canada's total trade in the last twelve months is \$281,000,000 greater than in the preceding 12 months. Both import and export figures show marked advances over the totals for the past 2 years. In the exports from Canada, agricultural products and wood and paper products lead. Imports show sharp advances in metals and textiles.

The total trade for the 12 months ended September was as follows:

1924—\$1,912,000,000.

1925—\$2,023,000,000.

1926—\$2,301,000,000.

### Cold Rush To Sweden

Skellefteå, Sweden.—A regular gold rush on the Alaskan style is taking place here, due to the reported new discoveries of valuable ore bodies in the province of Vesterbotten. The list of minerals they contain includes copper, zinc, arsenic, silver and gold.

London.—Economic pressure, strengthened by the coming of winter, appears to be driving the contending elements in the long protracted coal strike in the direction of peace. If appearances are not illusory, negotiations for a settlement by compromise will be renewed this week.

The Trades Union Congress council, which has constituted itself a mediatory body in the dispute, held a lengthy consultation with the miners' leaders and with representatives of the government. The chief reason for these conversations was to avoid the difficult task of consulting various industrial unions next week on the miners' demand for an embargo on the movement of coal and to consider the problem of a levy on the various unions to assist the miners' cause.

As an outcome of these conferences, it was stated unofficially that both the government and miners have been induced to make concessions.

Precisely what concessions have been made have not been revealed, but it is understood they involve an intermediate position between the miners' demand for a national settlement and the owners' insistence on a district settlement.

Only recently Premier Baldwin suggested that the miners might obtain the principle of a national settlement in fact, if not in words. Later he withdrew this offer when the miners did not follow it up.

The government discussions were in the hands of Chancellor of the Exchequer Churchill, who, with the thoughts of his next budget statement in mind, may be presumed to be anxious for a quick settlement for the industrial dispute which has cost England so much.

The strike now in its seventh month, is adversely affecting international interests, as well as national. The conversion of the British Isles from a great coal exporter to coal importer is tending to dislocate the shipping world and appears to have led to a great increase in shipping and freight rates.

Some European countries are feeling the pinch. Denmark has been obliged to resort to coal rationing. Austria is in a similar dilemma, and Poland and other countries are suffering through the scarcity and costliness of coal. At home there is a daily tale of further industrial concerns closing down.

## Would Return War Booty

Moroccan Government Asks Confiscation of Rifian War Lord's Property

Madrid.—The Moroccan Government has issued a decree calling for the confiscation of the property of Abd el Krim, the former Rifian war lord, who has been sent in exile to Reunion Isle in the Indian Ocean, and his followers. The decree specifies that all the cattle and grain which Krim seized during his warfare against the French and Spanish forces shall be returned to the former owners.

### Auto Exports Increase

Ottawa, Ont.—Canada's automobile exports increase. In the last twelve months passenger and freight autos have been sent to 61 countries throughout the world, from Argentina to Iceland, from Iraq to Mexico. The value of these exports was \$40,706,949.

## Board Will Not Order Drying of Tough Grain At The Present Time

Winnipeg.—The drying of tough and damp grain will not be ordered at the present time, nor will the moisture test of straight grain wheat be raised. These two questions formed the main topic for discussion at a meeting before the board of grain commissioners here. Public and private elevator interests and the Canadian pools were represented and many of the local grain traders took advantage of the sitting to listen in to the proceedings. Following a lengthy discussion as to whether it was advisable to order the drying of tough grain at this period, it was ultimately decided to defer any action, but the board made it plain that should the necessity arise, it would take drastic action to save the crop from wasting. The chairman also intimated that the press might, through its columns, advise farmers who have shipped tough and damp grain, to instruct their commission men to have this dried and so prevent loss from deterioration. It was thought by certain terminal representatives that drying of tough damp wheat should not be delayed longer,

but a speaker on behalf of the pool, and a shipper's representative both expressed the opinion that tough wheat was shipping out faster than the straight stuff, and that meantime they held no fears for deterioration.

With regard to the moisture test, several interesting facts were related. Chief Inspector Fraser, in answer to a question, intimated that the present test applied in the process of inspecting, did not permit of grain containing more than 14.1 per cent of moisture, grading straight. A representative of the Alberta wheat pool stated that it had come to his notice that at many points in his province, farmers marketing at country points where there was no government inspector, were having their grain graded tough if it contained more than 14 per cent moisture. The pool had applied to the commissioners for the raising of the test to 15 per cent, but their representative stated that following a conference with the chief inspector the board of commissioners and others, they were satisfied that the present test was satisfactory to them.

## Would Use Air Route To Link Together Various Parts of British Empire

London.—From London to Canada in two and a half days, to India in five days, to Cape Town in six days, to Australia in 11 days and to New Zealand in 13 days. These were the possibilities of the air which Sir Samuel Hoare, British air minister, submitted to the Imperial Conference. "There is today no technical or operational reason," Sir Samuel declared, "why, by airplane, London should not be brought within a fortnight of the farthest cities and territories of the Empire." Sir Samuel devoted himself to civil aviation and proposed the organization of long distance Empire air routes beginning in the Far East and from Australia to Cape Town on the mosaic plan. "We must," he said, "each of us insert our particular stone in the design."

His proposal, Sir Samuel said, involved no subsidy. It involved nothing more than co-operation between our government and another, and between military and sea ice flying. Sir Samuel pressed that the Dominions and Dependencies should create and maintain landing grounds in good order. He held that the airship would carry out the long distance, non-stop air journeys of the future and indicated that two airships were now being built in England which should, with a normal load of freight and passengers, be able to fly without refuelling in good weather a distance of 4,000 miles. There would be promenade decks outside the cabins, and ample smoking and dining rooms.

The airplane and airship were really complementary to each other, the minister said. It was necessary to organize both along the lines of long distance flying, the airplane being invaluable for short stage traffic and particularly needed at present when the airship program was still in the experimental stage.

## The Age Of Science

Almost Every Line Of Human Endeavor Must Have Sanction Of Science

This is the age of science. It is seldom that anybody tries to make anything or do anything without having the sanction of science.

Are you hungry? Be careful not to feed until you have had scientific advice on the best means by which hunger may be appeased. Are you young? Do not hope to attain old age unless you heed the value of science as it tells you how to live. Are you old? Then, indeed, do you require the best scientific advice so that you may grow older.

This is the age of science. The other day a learned Toronto doctor gave a lecture to bakers on food, says the Toronto Star. In the course of it he pointed out that human food consists largely of acids and alkalis. These should be balanced. There should not be too much of either. The chief spokesman baker of North America was present from Chicago. He arose and proceeded to knock the learned doctor. Bread is listed among the acid foods. Why should a convention of bakers be told that alkaline are essential?

Another instance of this occurred some time ago in the press that the fruit and vegetable growers of the country were asking the Tariff Commission that customs duties be put on imported fruits and vegetables. Dr. Hastings, medical officer of health for the city, heard of it, and was asked in the press what he thought of it. He did not think much of it. As caretaker of the health of the people at large his feeling was that the more fruits and vegetables the people ate the better, that any interference with a enterprise of man in the proper feeding of the people would be an error.

Dr. Hastings is being censured for the opinions he offered. Dr. Jackson is censured for what he said to the bakers. Both were told that they should attend to their own business. But were they not attending to their own business as medical men and scientists?

This is a scientific age. But now and then it is made to appear that the scientist is expected to be very, very polite and say only what he is asked to say.

## Spring And Fall Litters

Instructions For Breeding Sows For Two Litters A Year

In discussing the breeding of sows for two litters a year the Dominion Animal Husbandman (Mr. G. B. Rothwell), in his recently published pamphlet on breeding and feeding the market hog, points out that under the two litters a year plan the spring litter must needs be farrowed not later than the middle of April. This is necessary since September may be regarded as the fifth month of fall farrowed litters except in the case of the more specialized breeder who has special facilities for housing and caring for the later litter. The average farmer can however, so regulate his breeding dates that the second litter will arrive not later than the end of September. Thus enabling the sow to have a brief rest between litters, and to be on the gain before being bred for the second litter. It is very important adds the Dominion Animal Husbandman, that the sow be allowed two or three weeks to get on the upgrade, particularly if she has just weaned a large litter. Close breeding should be attempted only when the sow is in good condition, where, for instance, the former litter has been small.

Mr. Rothwell says it is in the pamphlet, which can be had free of cost by applying to the Publications Branch, Ottawa, that for the spring litter the sow should be bred from the middle of November to December 20, or not much later. She will then farrow from anywhere around March 6 to the middle of April. She can then be bred for the fall litter from about the first week of May to not later than June 10 or 12 in order to farrow by the end of September.

## B.C. Apples For Toronto Fair

The Associated Growers of British Columbia will once again stage a big exhibit of the famous Okanagan apples at the Toronto Royal Winter Fair, and the exhibit is now being selected and packed at Princeton under the supervision of A. C. Little with H. N. Porter as chief packer. They have prepared these exhibits for the past four years and recently despatched the Associated exhibitors for the Imperial Apple show in London, Eng.

A wealthy Parisian has left \$10,000 to his cook, because she was the only one who made soup to satisfy him.

Chicanery policemen will carry cameras to preserve evidence of crime and accidents.

W. N. U. 1653

## Lotteries Suppressed Hundred Years Ago

Became Vice In Great Britain And Was Declared Illegal

Britishers are just now recalling their last State lottery, which legally passed out of existence one hundred years ago after being an official and public feature for more than three hundred years.

The clergy took an active part in these lotteries, many of which were for the benefit of their parishes. The Archbishop of Canterbury was one of the trustees in a lottery that contributed toward the founding of the British Museum. Moreover it is recorded that persons were not averse to including an invocation for success in their prayers.

Though originally the lottery, as inherited from England, served a public purpose among the early settlers in the United States as a ready device to recoup public funds at a period when colonial credit abroad was precarious, and development at home necessary after the exhaustion and waste of war, yet it became a vice that grew upon its deluded supporters.

"Something for nothing" became the public obsession. The American Weekly Mercury of Philadelphia on February 23, 1720, announced a "new brick house at Third and Arch streets" as a lottery prize, for which 350 tickets were sold at 20 shillings each. Though Pennsylvania passed a law against private lotteries in 1720, the evil increased.

In 1820 the New York Grand Jury reported that there were fifty-two drawings a year for prizes reputed to be worth \$9,270,000, that public morals were suffering; it noted that lotteries were "pernicious, creating a spirit of gambling which is productive of vicious habits, idleness and ruin of credit and character." Between 1830-35 nearly every state banned lotteries.

## The Hall Of The Winds

Fantastic Building Erected By Indian Ruler Of Jaipur

There is a wonderful variety in the architecture adopted by Indian rulers for the building of their palaces, and some of them are of considerable merit.

But the Hawa Mahal, or Hall of the Winds, built by the Maharajah of Jaipur, certainly stands out for uniqueness, at any rate, it is a very imposing building, facing the main street near the entrance to the palace in which he resides, and is of a singularly vivid rose color, rising in the form of a pyramid, bristling with a silver-studded facade, composed of a hundred bell towers, and sixty-five projecting windows, adorned with balconies and balustrades, placed in openwork with countless flower cut out in stone. No wonder that one traveller seeing it, exclaimed, "A vapoury, impossible, construction."

But it was one of the chefs d'oeuvre of the famous Jey Singh, and he was very proud of his handiwork. Few would call the building beautiful, though it can claim to be fantastic. This wonderful structure is made of brick covered with stucco, and when it is freshly decorated, cannot fail to attract the attention of the visitor.

## Youngest Is Seventy-Nine

Rodgers Family Claims Championship Of Canada For Longevity

Another family has come forward to claim the championship of Canada for longevity. W. P. Rodgers, real estate man of Winnipeg, a member of the family, is the authority for the claim. In Mr. Rodgers' family there are five members in the old age group. The oldest is Mrs. Eliza Smyth, Toronto, aged 92; then Mr. Rodgers' father, John Rodgers, now retired at the age of 90, and living at Spilling, Ont.; next is Robert Rodgers, aged 87, still actively engaged in farming at Spilling, and the baby of the family is Mrs. Anne Reid, who resides at Belleville, Ont., and is 79 years of age.

## Bishop Likes The Oboe

"I have a special admiration for the oboe, and if I am allowed to play an instrument in the celestial choir I would gladly surrender my harp, golden or otherwise, if only I had the privilege of playing a few confidential notes on the oboe," said the Bishop of Chester at a musical conference in Chester.

## Negro Woman Lawyer

The first colored woman ever admitted to the District of Columbia bar, Dill M. Cooper, twenty-six, took the oath recently. Chief Justice Walter McCreary congratulated her on her accomplishment. She was graduated from Armstrong High School and finished her law course at Howard University.

The fad of painting front doors in brilliant colors has given the variety of Joseph's coat to many London streets and residential squares.

## Canada Should Use Her Raw Material

Greater Percentage Of Exported Foodstuffs Is In Unmanufactured Form

Over a million dollars' worth of canned soup was imported into Canada in the last fiscal year to supply domestic needs, despite the fact that all the ingredients necessary for the manufacture of this commodity are produced in the country. And when this country is obliged to import each year large quantities of canned soup, or any other product which can be manufactured in the Dominion, there is apparently a serious need of further developing our foodstuffs industries.

As a producer of immense quantities of raw materials, particularly foodstuffs, Canada stands near the top of the list, but when we investigate closely and find that the greater percentage of our exports of foodstuffs are in an unmanufactured form, a doubt arises as to whether we are realizing to the fullest on our production.

Today there is a greater need than ever for manufacturing raw materials into a finished product before exporting. Turning wheat into flour before shipping abroad is one instance of greater utilization of our materials. This list could be extended somewhat, but it is small in comparison with the number of unmanufactured foodstuffs that leave the country.

Competition is keen in every market the world over. Marketing, distributing and advertising methods are more advanced now than they have ever been. If Canada is to reap the utmost value from her great productive abilities, closer attention will have to be paid to supplying the export trade with a manufactured rather than an unmanufactured product.

## The First Thermometer

Wines Or Water Served As Indicator In Tube

There are not many people who, at some time or another, have not had their temperature taken. The little glass tube with its shining thread of mercury, is one of the first instruments used by doctors and nurses in their fight against disease; while in science and industry the thermometer plays an important part.

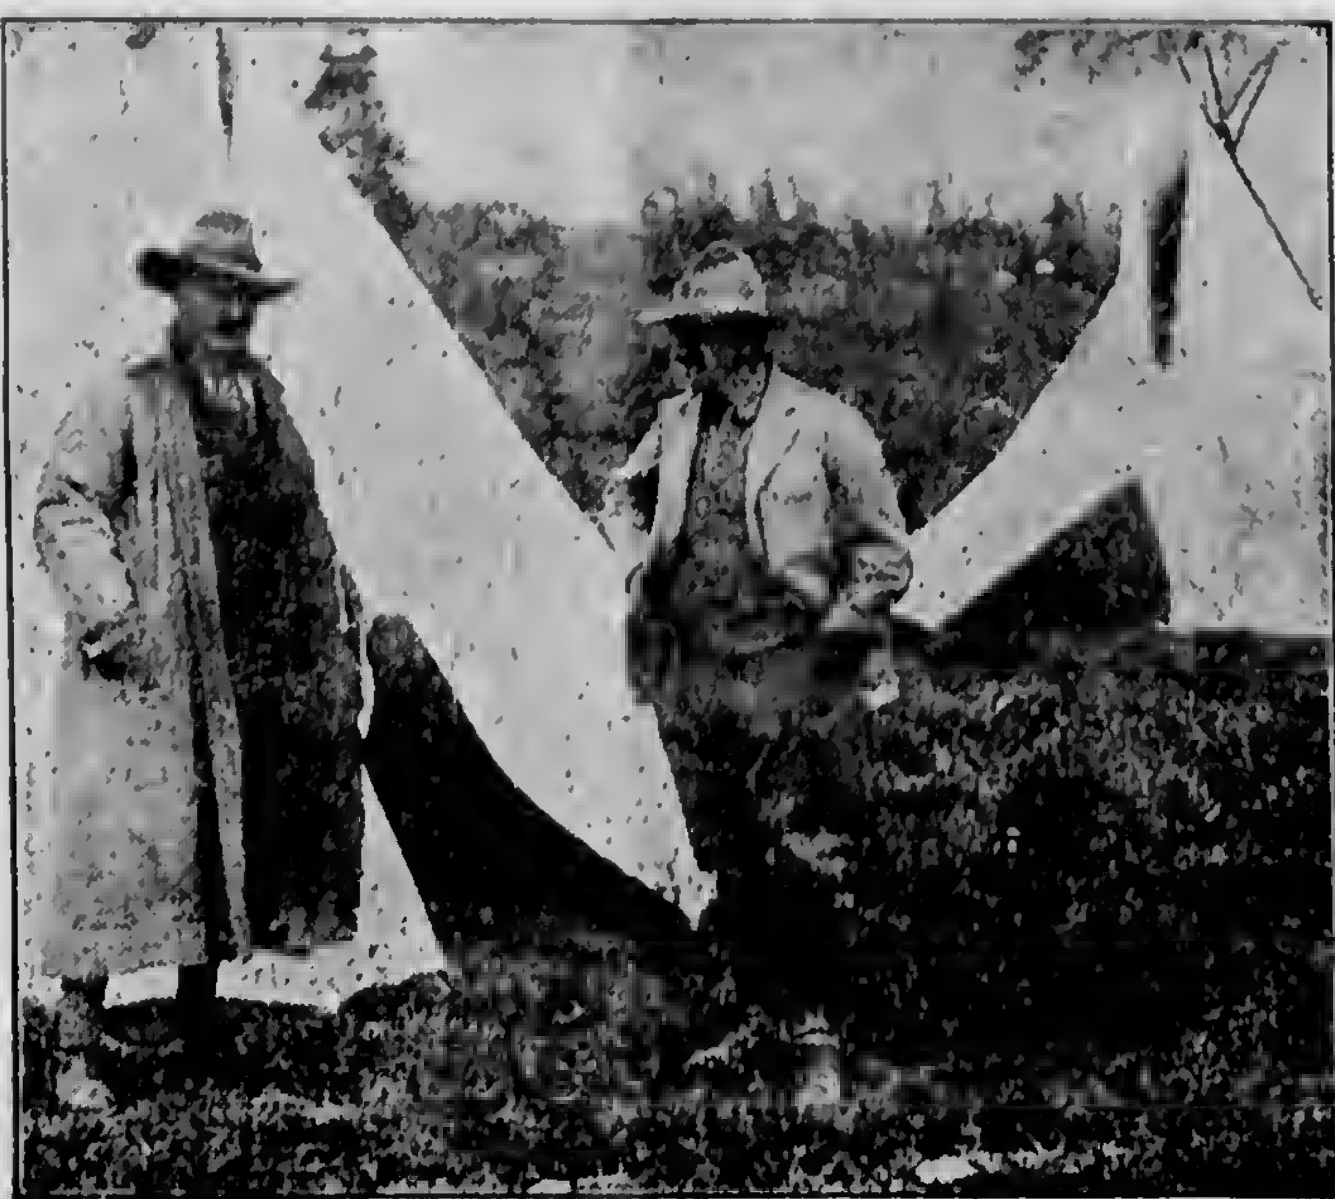

Many types have been evolved since the first one was invented in 1602 by the Italian scientist Galileo, who is also credited with the invention of the microscope.

As first invented, the thermometer was an air thermometer; there was no liquid in the bulb itself, wine or water serving as an indicator in the tube. M. Rey, a Frenchman, was the first to find out how to fill the thermometer with liquid, and in 1622 Rey wrote to Father Marston, a theologian, telling how he had used wine for this purpose.

## Community Radio In Russia

The Soviet Government of Russia following its present policy of general education and national propaganda, is equipping every village and hamlet in its dominions with a central receiving set, whereby the programs of the Government stations may be received en masse by the population, according to the reports of recent travellers.

The army made it still an integral part of the United States army, the War Department having recently set aside \$20,000 for the purchase of these worthy animals at \$165 a head.

## Novelists Meet in Rockies

Morley Roberts (left) distinguished British best seller, is relating his experiences in the Canadian Pacific Rockies 42 years ago when he worked on the transcontinental railway construction with pick and shovel, to J. Murray Gibson, founder and first president of the Canadian Authors' Association, whose latest novel "Eyes of a Gypsy" has recently appeared. Mr. Roberts, after revivifying the scenes of his strenuous youth, will write a book of reminiscences dealing with life, then and now, in British Columbia. The photograph was taken in the Plarungau Valley where the annual Bow Wow of the Trail Riders of the Canadian Rockies was held this summer.

## Long Flight Of Butterflies

Have Been Known To Travel Over 3,000 Miles

Trail as the butterfly looks with its brilliant, gauzy wings, the great wing strength of the little insect is phenomenal.

The beautiful butterflies, for instance, which haunt the summer gardens of Great Britain travel in myriads every year, to and from the shore of the Mediterranean sea.

Painted Ladies and Clouded Yellows usually "push off" from the region of Roulogne. They come over in a long, straggling column on calm, sunny mornings, leaving the French coast soon after sun-up and landing at some point between Dover and Brighton in the late afternoon.

They are in follow-my-leader formation, not in single file, of course, but scattered in a comparatively narrow stream. Though the stream may go on for two or three hours, bringing in Clouded Yellows at the rate of several hundred a minute, all the tens of thousands of arrivals land usually on a strip of cliff or downs not more than a quarter of a mile wide. If a wind springs up, however, the stream is scattered along for miles.

"The Painted Ladies," whose children constitute the British-born autumn butterfly brood, have actually winged their way 3,000 miles, from Palestine and Syria. Yet after all that prodigious journey, the migration does not come to an end in England. On to the most dauntless phantoms in Iceland, where they arrive in July.

## A Miniature Dictionary

Volume So Small It Could Be Put In Watch

A dictionary so small that it might easily be placed inside a thin watch case but which has 337 pages of finely printed matter has come into possession of Mrs. Anne N. O'Callaghan.

The miniature volume measures fifteen sixteenths of an inch by five-eighths and is one eighth of an inch thick. A gold fillet on a red cover proclaims it to be "Bryce's English Dictionary," published by David Bryce and Son, of Glasgow, Scotland, for Robert Macpherson. It is believed to be at least 125 years old.

A foreword tells how briefly in completion was achieved. "The special feature of this volume is that by means of some words which could easily be supposed either in going or returning to offer no difficulty of people likely to consult a dictionary, space has been found for a number of puzzling words occurring in the scientific and very literature of our time."

## Will Send Warning Of Hurricane

The coast of China has been from time immemorial exposed to the ravages of typhoons, or torridoes of extreme violence from the south. A new station of enormous power has been erected at Praya, an island 50 miles north of Hong Kong, from which it is hoped to detect the approach of storms (by the atmospheric pressure) and send out timely warnings to the mainland.

"Hail! You can't ride on this toilet, it says New York to Chicago and you're going from Chicago to New York."

"Oh, that's all right. I'll ride back-wards."

"That's a damned clever dog John bought, isn't it?"

"Yes, it is. John calls it, saying, 'Are you coming, or aren't you?' And the dog either comes, or he doesn't."

## Money In Poultry

Is Possible To Make A Living From 500 Birds

"It would not be difficult to make a living by poultry alone even in Manitoba," said A. C. McCulloch, Dominion Poultry promoter, in an address given at Brandon recently.

Mr. McCulloch held that it was possible to make a living off 500 birds, though one person could handle considerable more than that number. His address was a resume of the work the Dominion poultry department is doing in Manitoba. Speaking of the development of the industry, he stated that the first car load of eggs that went from western to eastern Canada was in 1915, but that last year alone from Manitoba and Saskatchewan 307 car lots of eggs were shipped east of Winnipeg, apart from the immense market provided by the city of Winnipeg alone.

No referred to the fear of many people a few years ago of there being no market. One way in which the government had solved this problem was to launch a publicity campaign in eastern Canada urging increased consumption. The result was that while the consumption per capita in 1920 was 16 3-4 dozen eggs, it was now 26 dozen per capita in Canada. This showed that the people were more alive to the food value of the product. The inspection and grading of eggs had also done much to develop the industry.

## New Uses For Sulphur

Research Engineer Makes Multitude Of Things From Yellow Mineral

The average person thinks of sulphur in terms of gunpowder or matches, or the sulphur-and-molasses remedies of our grandmothers.

But to William Kohbe, a research engineer for a large sulphur company, the yellow mineral means exquisite cases, table-tops, railway ties, pipe coverings and a multitude of other things.

One of the greatest obstacles which the inventor has had to combat was the public notion that sulphur was very inflammable.

"Of course sulphur will burn," said Mr. Kohbe, as he handed a beautifully wrought sulphur vase that looked like bronze, "but the fact is that it is very difficult to make it do so."

Born for radios and phonographs may be made of sulphur, he said, and resemble papier mache, although much stronger. Sulphur baths are used to strengthen some of the millions of cheap toys imported annually.

## Not Allowed To Work

Sacred Elephant Being Sent To U.S. From London Zoo

Sa, the elephant at the London Zoo, is to be shipped to the United States. He is owned by a wealthy Burmese who rented him to the Zoo, but unless a zoo elephant contributes toward his keep by giving rides to children his cost is prohibitive. Sa, being a blond elephant, is venerated by the people of his native land of Burma and may not be used for public rides. Hence Sa is being exported. He will go first to California, where according to his owner, "a wealthy American" may buy him.

## New Way To Advertise

Apparatus In Rio De Janeiro Shop Sprays Perfume

Perfume is considered essential to being well dressed in South America, and perfume vendors put their products "on the air" in order to attract customers.

In Rio De Janeiro, perfume shops are equipped with apparatus resembling an electric fan, which sends a constant spray of perfume into the atmosphere.

Hueros Aires maintains regular perfume stations, where large forces of sales girls are kept busy.

## Radio For Every Patient

At Grasslands Hospital, East View (near New York) a \$5,000 radio installation has just been put in operation. Individual headphones are provided for the bed of every patient. The funds were raised by a committee of residents near the hospital; and about thirty patients enjoyed the opening ceremonies and programs.

## Benefit From Tourists

If the influx of American tourists to Europe continues, they will have supplied Europe with sufficient money in ten years to pay off all her debts to the United States for the next 68 years, calculates the Berlin "Social Demokratischer Pressedient."

A Pottsville, Pennsylvania, coal miner who just died, aged 106 years, ate muerkraut at least once every day.

Experiments show that it is possible to produce flour from bulrushes. The flour is said to be high in nutriment.

## Would Be Menace To Public Health

Higher Tariff On Fruit Is All Wrong, Says Ontario Medico

The efforts of Canadian fruit and vegetable growers to impose, as suggested at Ottawa, a seasonal duty that would exclude early American fruit and vegetables from the Canadian market is strongly to be condemned from the health standpoint, according to Dr. C. J. Hastings, medical officer of health of Toronto.

"It is important that in the best interests of their health our people should, as far as possible, have fresh fruit and vegetables every day in the year," Dr. Hastings said.

"So far as fruits which are not grown here are concerned, there should never be any duty. Such fruits as oranges, lemons, limes and grapefruit, though not native products, constitute or should constitute an important part of the diet of all, especially children.

"The only time that a duty would be justified is when fruit and vegetables ready for use can be procured in this country."

"This of course is the exact opposite of the aim of the Canadian growers, who claim that the admission of early American fruit takes the edge off the Canadian appetite and lessens the demand for local produce.

"This should not be true, and will not be true if our aims are successful," said Dr. Hastings. "We have been endeavoring for years to cultivate the appetite for fruit and to educate people in its regular use. This would develop a permanent appetite and a regular desire for fruit."

"Of course during the Canadian fruit season the argument would not apply at all. The fresher fruit and vegetables are, the better they are, and those grown in Canada are decidedly fresher than the products of the West Indies or the United States, which have to be transported."

Consumers generally are strongly opposed to the proposed increase.

Doctors agree that fruits and vegetables are essential to the health of the people.

## The Unknown Great

Names of Men Who Did Things of Value Are Forgotten

When you come to think of it there are men, and many of them, who did things of value, but whose names are lost in the mists of antiquity, if indeed they were ever known. What of the forgotten Florentine who was the first European to engrave on wood? And who invented the needle? Or who taught men to use a wheel? Or who first thought of making an ice house? Who built the first chimney? Who laid the first wooden floor? Who invented glass? Who first braved the laughter of society by being the first to use a fork? Who was the unpopular citizen who for health's sake, put through the law requiring every one going out of town in a horse-drawn vehicle to take with him a load of garbage? Those and others of the unknown great surely shaped things to definite ends, though they fashioned neither apples nor dramatic tragedies.

## Perform Annual Task

New York Police Dispose Of Assortment Of Criminals' Weapons

The annual destruction of dangerous weapons accumulated by the police department took place recently under the supervision of Thomas J. Norgan, property clerk of the police department.

Packing cases contained 2,519 pistols, 210 shotguns and rifles, and 281 other weapons, such as blackjacks, stiletos, daggers and swords, were loaded on two automobile trucks and taken to Pier A at the Battery.

The cases were loaded on the police boat Patrol, which took them seven miles out to sea, where they were dumped overboard. The destruction of the weapons was done according to section 1899 of the penal law.

## Famous Painter Is Dead

Charles M. Russell, famous painter of cowboys and Indians, died suddenly at his home at Great Falls, Montana, after a heart attack. He was sixty-one years of age. Paintings by the artist of the pioneers are in possession of the government of Saskatchewan and of the Prince of Wales and the Duke of Connaught.

## B.C. Salmon Pack

The British Columbia salmon pack for 1926 to date is in excess of the 1921 and 1925 catch, according to a return issued by the Dominion Fisheries Department. The total is \$1,455,872 cases, as compared with 1,215,482 in 1925 and 1,312,081 in 1924.

One-half of all the people on the earth die before the age of sixteen, and only about one person of each 100 born lives to the age of sixty-five.

## Contractor Found Way To Health

After Suffering Tortures From Indigestion and Run-Down Condition, He Quickly Regains Health And Strength.

Edison Bradshaw, a successful Toronto contractor, 413 Wellesley Street, says: "I hope my story will be the means of helping others who suffered as I did. I feel like a new man, thanks to Taulac."

"Before taking Taulac, I doctored for nervous prostration but seemed to be getting worse. I had no appetite and when I forced myself to eat the pills from indigestion were torture. My heart bothered me after the slightest exertion. I was nervous and irritable and could scarcely sleep. At times I would doze off, then suddenly my muscles would twitch and I would awake with a start. I was almost in despair."

"Nothing seemed to help me, until I started to take Taulac. The first two bottles made me feel so much better that I kept on taking it. Now my appetite is very good, stomach normal, nerves in good shape. I can sleep well at night. In fact have entirely recovered."

"I heartily recommend Taulac because I feel sure it will do for others what it has done for me in restoring my health."

Taulac has helped thousands of men and women. It is nature's own remedy made from roots and herbs according to the famous Taulac formula. The first bottle, as a rule, brings wonderful relief. Keep up the treatment and see how quickly you will grow stronger and healthier.

Don't neglect your health, don't suffer needlessly but begin taking this marvellous tonic now. Ask your druggist for Taulac today.

Strange, Romantic Love Adventures of the Flapper you know

### CHAPTER XVIII.—Continued

She saw the stubbornness that she always hated, settle deeper in his eyes. "No," he returned. "It can't be worked out that way. Jo, I'd never live with you in a house you'd paid for, even with money given you for a reason that I hope will turn out to be all right. You see, I too, have plans. You know them, even if you never cared much about listening to them. I've got to make my way. The career I want is one that can't be bought. You can't give it to me like you would a birthday present. Different, you see, from yours?"

She looked at him from widened eyes. She wondered at her own calm. She was not hurt, as she had been that night at Mrs. Adams' when John repulsed her. He was not doing that sort of thing again. Now he was quietly, stubbornly taking himself out of her life, or rather thrusting her out of his.

A wild impulse to run up stairs, wrap herself in a cloak and run out into the street with him, thrilled her for a moment and then lapsed into the deadly calm that puzzled her.

"But John," she said, "I love you. I have always loved you. Why must you make such a fuss about the money? It won't change me, not so much as it has changed you?" He interrupted her:

"That's just it! I won't change you. It has only brought you out of yourself, and revealed you. This sort of thing won't get you any place in the end. It is not the background for a girl, no matter how good she is—and I believe, Jo, as I always have, that you're good. You will stay good just as long as you can. I shall always

want you, but I just can't have you. Can I?"

His last words were a pleading for his justification. It would have been better, perhaps, if he had not spoken them. They reminded Joanna that he was one who would not, could not, understand her, or, one like her. Still she wasn't hurt. She suffered, because her heart was turning over. She longed for him, wanted to yield to him as he would have had her yield to his fears for her and to his ideas that she should be some other kind of girl, but she realized that it would all be useless. She would never be content with all enchantments taken out of the world that had suddenly become so lavishly with her.

"But John," she said, "I love you. I have always loved you."

"Then you won't be coming back, you won't accept things as they are and come back to me?" she asked.

"If you still want me, when I have made my own way, and have money of my own, I will be wanting you," he said, slowly. She probed his words and understood what he really meant. "You mean," she said, "that you will want me enough, even, to take me no matter what I shall have become, by then? Isn't that it? He wouldn't answer her. She continued:

"Was it because you think that I should be drab, and a kill joy, and go into a shell and hide except when some praiseworthy chaperone is satisfied that I have enough clothes outside of me and enough false shyness inside of me to make it safe for her to take me out for a walk in a church yard, that you spent more than an hour shut away in here with Yvonne? She doesn't walk about with her eyes on the ground and her mind on the purities of the lily. Didn't you suffer—all alone with her?"

"We were talking of you," he replied, shortly.

"Yes," she retorted, her eyes narrowed a bit, "there's a man who coaxed me into the whiter garden just a little while ago, and spent the whole time talking of his wife." She knew that she was being utterly foolish and childish, and irrelevant. But, still, she watched John curiously. For some reason he thought it necessary to explain.

"When I told her I was going and wanted to say goodnight, as I should,

she brought me in here. Before I realized it I got to telling her how much I do love you, and why I can't have you. That was all. She told me, of course, that I was a fool. She is one who would think so."

"And so am I John," Joanna told him, quickly.

Kenilworth opened the door. When he saw that John was there, still there, he would have gone away and closed the door behind him. Joanna called him back.

"Mr. Wilmore is just leaving," she explained, eyeing John, coolly. "And I don't want to go out and dance just yet. I want you to stay in here and talk to me."

It would have been an awkward moment if Roddy had been one ever to be at a loss to meet any situation. His wisdom seldom failed. He chafed, her and said good night to the younger man with an ease that cleared the atmosphere. When John went out Joanna did not get up from the couch. She held out her hand to him and when he took it she wrapped her fingers about his and held them for a moment. There were no words between them.

Roddy went over and gently closed the door, which John had left opened. When he stood over the girl her head had dropped onto her arm. She had drawn her knees under her. As Roddy took note of her he concluded that just then she was not thinking of herself, or of anything about herself. Instinctively he sensed the slow swaying of a scale beam, weighted at either end with two precious bits of magic. And he knew that one end of the scale was slowly dropping. He wondered which end would be the heaviest.

Without a warning rustle the limp figure on the couch straightened and rose. Roddy knew how the scale had turned. He was startled by the change in Joanna. Her pose was new, and almost regal. There was something haughty and something else defiant and dangerous in her.

"I wonder," she asked him, stirring him with a look from between her lids that he had not caught before, "if you would think me very silly if I should ask you to do a very silly thing."

His answer was the obvious one. And it was obvious, also, that he should go a little closer to her. The message in her eyes made it so.

"I want you to kiss me," she said. He drew her up to him instantly. His lips had almost brushed hers when she suddenly pressed him back—again that trick with her hands. "I want to tell you something, first?" she exclaimed. "It isn't you Roddy, that I want to kiss me—anyone would do just now. There's something on my lips, something that was put there a little while ago, I want taken off—it needs a kiss to do it. Because you happen to be here I am asking you. You see I must be fair with you—since I am doing the asking."

"One explains a kiss afterwards, never before," he murmured and caught her hands and held them. She yielded her lips completely. She felt that she was being wrapped in a burst of flame. She closed her eyes so that she would not see what was in his, but she gave herself to the caress without stint. When he released her she said:

"There! You mustn't spoil it by demanding another. I want to go out to the party, now, and dance. And I am going to flirt outrageously with Teddy. Don't mind. He has been begging me to discover how sentimental he can be all evening. But I still want you to do something else for me. I want you to make sure that Yvonne knows you kissed me, and that I allowed it. You don't need to say I asked you but you may say that I didn't take my lips away."

Within half an hour Joanna was hidden away, in the safest corner of the winter garden, with young Teddy. She had promised him only fifteen minutes. She granted him but a few more, despite his pleadings that one couldn't crowd an eternity into such a

## HAIR CAME OUT IN COMBFULS

Pimples on Scalp Itched Badly. Cuticura Heals.

"After having the flu my hair fell out so that I had to have it bobbed. I also had some pimples on my scalp and it itched badly. My hair was lifeless and dry, and when I combed it, it came out in combfuls."

"I sent for a free sample of Cuticura Soap and Ointment. It helped me so I purchased more, and after using two cakes of Cuticura Soap, together with the Cuticura Ointment, I was completely healed." (Signed) Mrs. Geo. H. Elliott, West St., R. 4, Orillia, Ont.

Cuticura Soap, Ointment and Talcum are all you need for everyday toilet and nursery purposes. Sample each free by Mail. Address: Canadian Distributors: J. H. Elliott, Ltd., Montreal. Price, Soap 25c, Ointment 25c and 50c, Talcum 50c. Cuticura Shaving Stick 25c.

Fine for catarrh when melted in a spoon or snuffed up the nose and vapors inhaled.

## Head and Chest Colds Relieved In A New Way

A Salve which Releases Medicated Vapors when Applied Over Throat and Chest.

Inhaled as a vapor and, at the same time absorbed through the skin like a liniment, Vicks VapoRub reaches immediately inflamed, congested air passages. This is the modern direct treatment for all cold troubles that is proving so popular in Canada and the States where over 17 million jars are now used yearly.

Splendid for sore throat, tonsillitis, bronchitis, croup, head and chest colds, catarrh, asthma or hay fever.

Just rub Vicks over throat and chest and inhale the medicated vapors. It quickly loosens up a cold.

**VICKS VAPORUB**  
OVER 21 MILLION JARS USED YEARLY

short space of time. She insisted that he find Brandon and bring him to her. "He has not been nice to me, tonight," she explained. "And I want to be nice to." She laughed at that rhetorical mix-up and sent him away.

Roddy Kenilworth, when he had turned her over to Dorminster, went back into the morning room. When he had made himself a drink, out of the bottles in the cabinet, he settled back in a chair and fell to studying the ceiling. When Yvonne looked in he explained that his brain had become twisted around a conundrum and that he couldn't take an interest in anything or anybody outside until he'd straightened it out.

(To Be Continued)

## A New Hobby For Women

Remarkable Interest Is Now Being Taken In Basketry

Most people will have noted the remarkable growth of interest in basketry of late years. At last women have a hobby offered them far more interesting to the average person than sewing, which does not affect the eyes, and develops a decided creative ability. Practically all of the Federal and provincial institutes in Canada are promoting this work, as are also numbers of the schools, with the result that many people are finding that they can combine pleasure with usefulness in filling in their spare time at a pleasant hobby and at the same time furnish all the small articles of furniture which are so necessary to the comfortable home.

## Little Helps For This Week

Love is the fulfilling of the law, Rom. XIII. 10.

And see how everywhere Love comforts, strengthens, helps, and saves us all;

What opportunities of good befall To make life sweet and fair.

—Celia Thaxter.

Oh! let us not wait to be just or pitiful or demonstrative toward those we love until they or we are struck down by illness, or threatened with death. Life is short, and we have never too much time for gladdening the hearts of those who are travelling the dark journey with us. Oh! be swift to love, make haste to be kind.

—Henri Frederic Amiel.

An Oil for All Men.—The sailor, the soldier, the fisherman, the lumberman, the outdoor laborer and all who are exposed to injury and the elements will find in Dr. Thomas' Electric Oil a true and faithful friend. To ease pain, relieve colds, dress wounds, subdue lumbago and overcome rheumatism, it is excellent. Therefore, it should have a place in all home medicines and be amongst those taken on a journey.

## Luck Was Unexpected

Burglar Found Old Key Which Unlocked Safe In London Office

Breaking into an office in Bishopsgate, London, a burglar had an unexpected piece of luck. His search of the office revealed nothing of value except a key which he discovered in a corner of a desk. He tried the key on the safe, and found that the safe opened easily. He then helped himself to £150 in money and a deposit note for £4,600, and made his escape. The key was a spare one which had lain in the desk undisturbed for twenty years.

Corns cripple the feet and make walking a torture, yet sure relief in the shape of Holloway's Corn Remover is within reach of all.

The feat of moving a giant redwood tree, weighing 315 tons, in an upright position, has been accomplished by California lumbermen.

After Shaving—Minard's Lintment.

## Phone Service Across Atlantic

Will Soon Inaugurate Regular Service Between London and New York

The London Daily Express says that commercial radio telephone service between New York and London will be inaugurated before the end of the year. Experiments which have been in progress for two years by the Radio Corporation of America and the radio branch of the British Post Office, it adds, have resulted in overcoming the difficulties which hitherto prevented regular communication, and experts are now engaged in trying to find the best wave length and the most favorable transmission hours.

The Express states that the three now required to make the necessary preliminary connections for a trans-Atlantic radio telephonic conversation is no longer than a telephone connection between London and Manchester and that the sounds will soon be just as distinct.

## Says Modern Faces Lopsided

Symmetry Destroyed By Greater Use Of Right Eye

Modern faces are too lopsided to meet the beauty requirements of the old masters, says H. L. Taylor, chairman of the British National Council for the Preservation of Eyesight.

Men, and especially intellectual men, are much more likely, in his opinion, to have the right side of the face more developed than the left side. This is due to using the right eye excessively, with the result that it eventually moves away from the nose further than the left eye.

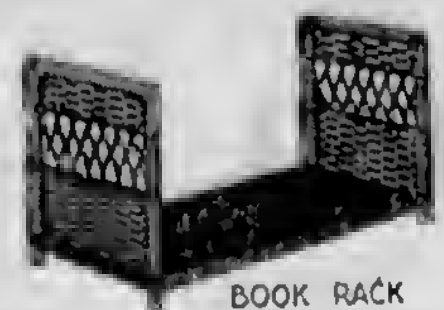

Modern women also suffer from this defect, Mr. Taylor declares. He says it is rarely that one finds women with the symmetrical, oval faces painted by Michael Angelo and Raphael. Even in Italy these types are not now numerous among peasant women.

Conquers Asthma. To be relieved from the terrible suffocating due to asthma is a great thing, but to be safeguarded for the future is even greater. Not only does Dr. J. D. Kellogg's Asthma Remedy bring prompt relief, but it introduces a new era of life for the afflicted. Systematic inhaling of smoke or fumes from the remedy prevents recurrences and often effects a permanent cure.

Men who are always attempting to kill two birds with one stone never bag much game.

A cow's hide produces thirty-five pounds of leather; a horse's only eighteen pounds.

## News Notes

Leo Van Assel spoke to his son  
Leonard, who is in Chicago, last  
Friday over the telephone. This  
establishes a long distance record  
for the local office.

Willbur VanOrman, who entered  
in the Herald Thanksgiving Road  
Race, over a course of three miles,  
came in sixth in a field of nine.  
Lee Spencer of Magrath was seventh.  
The race was won by Elmer  
Scott of Medicine Hat with  
John Kerr of Passburg second.  
Fred Lees of Coleman, twice winner  
of the Herald trophy, finished  
shortly after the commencement  
of the race.

P. W. Cope has re-opened the  
Raymond Pharmacy one door east  
of the Recorder office, and is now  
busy filling his shelves.

Work of excavating for the new  
Mercantile building began last  
Monday. The new structure will  
be 15 feet wider on the north.  
Mr. Allen having purchased the  
frontage formerly occupied by the  
Pharmacy. The old south wall  
will be used for the new building.

Mr. and Mrs. Lynn wall moved  
to Spokane this week.

A commendable feature of the  
great fire's aftermath is the speed  
with which those who were burned  
out are reopening for business.

Duffy the Tailor has re-opened  
in the upper storey of the Security  
building.

A number of local teachers attended  
the convention in Lethbridge last  
Friday and Saturday.

At the last meeting of the Town  
Council discussion centred on the  
fire and water situation. Appreciation  
was expressed for the splendid  
work of the Lethbridge fire  
brigade and of the work done by  
local people. H. F. Allen asked  
for a re-adjustment on taxes on  
property destroyed by fire.

We are thankful to the many kind friends who  
gave us so much help after the fire. These kindnesses  
have been much appreciated

We have opened our new store  
one door west of the Standard  
Bank, and new stock is arriving  
daily. We invite you to call.

nobody's business but your own, and  
for that reason they should be placed  
beyond the reach of meddling persons,  
theives or elements which compromise  
their security. Use a safety deposit box  
in your nearest branch of the Standard  
Bank. It is the most convenient method  
of safe keeping for documents, jewels  
and other small objects of value.
